

Hi there! If you're reading this then that means you've made it to my edits/graphics resource page. This page in particular covers the Photoshop portion. This is just a collection of resources that I either have personally used in the past or resources that I find useful in general. Please keep in mind that these resources that I will be linking **will not** cover every corner and aspect of Photoshop. I use Photoshop CS6, but really anything CS2 and on works just fine.

Please also keep in mind that **some of the resources that are linked here will need some sort of credit given back**. For example, using a sprite from a sprite sheet on Spriter's Resources usually warrants a link back to the page it came from. I always try my best to link back to the original uploader when making edits. A lot of people work hard ripping sprites/models from games or creating images, and they deserve at the very least a link back to their page.
