FURTHER RESEARCH

Revised Research Question:

Has the Barclays Center helped with the process of gentrification in the Fort Greene/Downtown Brooklyn neighborhoods?

Here is a map that helps answer my question:

Penn, Alyson. Brooklyn's Barclays Center Is Getting A 130,000-Square-Foot 'Green Roof'.

<https://www.businessinsider.com/barclays-green-roof-2014-4>

I selected this source, as well as, this specific picture because of the proposed plan of the future of the Barclays Center. This depicts how the Barclays center paved the way to the extreme gentrification of the

neighboring communities. The high rise residential and commercial buildings make room for wealthy individuals and will push out the local communities.

Describe the process you used to find this source including any keywords and the search engine or tool you used to search. If you found it during our Brooklyn Collection site visit, how did you find it?

The process I used was a web search log in. I search in the key words "before the Barclays Center" and searches through many pictures of the Barclays center and the surrounding neighborhoods.

What other sources or further information would help you answer your question? Where would you look for them?

The other sources I would use to help answer my research question is a main library source in Brooklyn, which would be the Brooklyn Public Library. I would search through old photographs or books of the history of Brooklyn, specifically the area the Barclays Center is located, in order to obtain a visual of Brooklyn before all of the construction began. It is very difficult to obtain them online.
