

# App Store Milestone 4 Redefinition

## Rationale for Redefinition

We are redefining because we've recently workshopped our vision and alpha tested the app, and found new features that would best serve both the users of and the long term vision for the app.

## Original Definition

From ~dilryd-mopreg/app-store:

Milestone 4 - Front end customization and publication.

ETA: January 6st 2023.

- Enable Developers and Curators to customize their pages. They will probably have a CSS file to customize which will be funneled to the User and be served on the User's front end.
- App Store will be published and downloadable on urbit
- There will be detailed documentation for App Store, describing how it works and how to use it
- A github pull request will be submitted to <https://urbit.org/applications/submit>

## New Definition

### Summary

Groups discovery and mobile view optimization

### User Stories

- As a curator, I want to list groups in my collection for users to browse
- As a user, I want to browse through a list of groups that a curator recommends to me

- As a user, I want to see a group's name, description, and host, and join the group easily from the app store
- As a user, I want a mobile-optimized experience the app store so I can easily use the app inside the EEscape mobile app or in a mobile browser
