

Environmental Policy

BWC Civil & Earthmoving is a Western Australian owned and operated business providing civil and earthmoving services.

Strong environmental consciousness is the key to the long-term growth and sustainability of our company and we ensure this is understood by every member of our team. Our key business strategy is to foster an environmentally conscious culture through education and engagement and continually improve our environmental practices across the business.

This is achieved through:

- Supply adequate resources that ensure the proper environmental management procedures are followed to assist environmental and community protection.
- Operate and comply with all relevant environmental legislation.
- Promoting awareness and commitment to environmental management amongst our employees, sub-contractors and other relevant parties working with our company.
- Identifying alternative, financially viable and sustainable courses of action to minimise environmental impacts, including recycling and reusing.
- Ensuring the prevention of pollution and the protection of sensitive environments, fauna and flora.
- Minimising construction-related impacts on the surrounding environment and community, including those related to dust, fire, hazardous materials, noise and vibration, surface and groundwater quality, land contamination and the preservation of Aboriginal heritage.
- Striving for efficiency in our use of plants, equipment and vehicles.

BWC Civil is committed to implementing an environmental management system into all its activities.
