

Core Curricular Resource: Amplify Math

Amplify Math is built around an exciting, hands-on, and problem-solving approach to help your child truly understand math, rather than just memorize facts. Your student won't just sit and listen; they'll be active participants who start with an engaging, curiosity-sparking problem and collaborate with classmates to figure out the solutions, sharing their "brilliant mathematical ideas" in a supportive environment. The program blends hands-on activities with manipulatives (physical objects) and digital tools, focusing on the process of thinking and building confidence so that your child sees themselves as a capable mathematician from day one, with daily, fun game-like activities to reinforce what they've learned.
