

Brag Diary

Challenge	Achievement
Using VS Code was difficult, and I didn't know how to use Git in the terminal.	Now I can confidently use Git commands, commit changes, and push my work easily, install extensions and other useful features of VS code
I knew nothing about JavaScript when I started.	I now understand how JavaScript code is organized and can use many built-in methods. Built apps such as quote generator and alarm clock.
I didn't understand GitHub at all, and I had no idea why it was useful.	I can now use GitHub, fork repositories, and collaborate with other developers.
I struggled with debugging and didn't know how to find errors in my code.	I can now use the VS Code debugger and console logs to quickly find and fix issues.
Working with arrays and objects was confusing at first.	I can now manipulate arrays and objects, use loops, and solve real coding challenges confidently.

Explanation how I used my Brg Diary

The brag diary is a reflection of my personal progress and achievements. It shows where I started and where I am now. At times, it inspires me to push forward and face new challenges. It reminds me how limited my skills once were, especially in moments when I feel skeptical or less confident about taking on something new. I would say reading a brag diary is like standing on top of a mountain and looking out over the challenges ahead, feeling empowered by how far you've already climbed.
