

Have you been personally affected by hearing loss?

Your lived experience and insight are needed in the review of proposed biomedical research.

Since FY 2017, the Hearing Restoration Research Program (HRRP) supports high-impact, cutting-edge research that fills unmet needs.

General Dynamics Information Technology (GDIT) is contracted to support this program by recruiting individuals who can share their lived experience with Hearing Loss.

The HRRP establishes priorities to deliver groundbreaking research and solutions for hearing restoration by advancing the understanding, diagnosis, repair, and regeneration of the auditory system.

GDIT is seeking individuals living with hearing loss. Individuals should be involved in advocacy, support, or educational activities to be considered.

- Selected individuals will receive training and support from GDIT staff and will receive an honorarium for their participation.
- The work entails reading biomedical research applications and providing a very brief written evaluation of the impact of each application.
- Work is conducted electronically over a 4 to 6 week period.
- Your work will culminate in a 1 or 2 day virtual meeting, where your attendance is mandatory.
