Breakout Session Day I

“Outreach” Working Group

We discussed what the working group has done to this point (provide a forum for discussion and presentation by groups working on languages and scripts other than Greco-Roman). We then considered how this working group might function moving forward, and how it would interact with the other Epigraphy.info working groups. (It was noted that many groups and scholars working on non-Greco-Roman languages and scripts would naturally be interested in areas covered by existing working groups, e.g. Ontology or Vocabulary.) One suggestion was that the working group might take as its goal the connection of Greco-Roman epigraphists and non-Greco-Roman epigraphists, both by bringing non-Greco-Roman epigraphists into Epigraphy.info and by helping Greco-Roman epigraphists connect to relevant non-Greco-Roman epigraphists outside of Epigraphy.info. This goal might be served both by synchronous efforts like the seminar series run previously by the working group and by asynchronous efforts to create a broader, connected network of epigraphists.

If you are interested in participating in the working group as we continue to refine our exact goals and methods, please put your name and email address here.
Alex Mullen alex.mullen@nottingham.ac.uk (for Gaulish, British Celtic especially)
Franziska Weise franziska.weise@uni-hamburg.de (contact to Thai and Chinese epigraphers)
Hamster Tamrazyan hamster.tamrazyan@epfl.ch (contact for Armenian epigraphy)

Presentations Day I

Please place questions here so that they can be answered and/or discussed!

Franziska Weise and Sylvia Melzer

Contact: sylvia.melzer@uni-hamburg.de; franziska.weise@uni-hamburg.de

EpiDoc Metadata Generator:
https://tools.fdm.uni-hamburg.de/mdg/generator_metadata_epidoc.html

Vincent Razanajao: To Franziska Weise & Sylvia Melzer: thx for your talk, happy to hear Patrimonium converter was used. My question: did you consider using an XML database where all XML files could be put and queried at the same time, though Query for instance?
Franziska Weise: [Sylvia may be able to provide more information later on] I can try to answer any question, but I will fail at the technical details of Sylvia’s research. Regarding your Question: I think, Sylvia did exactly that to query the material of EDAK and CGRN in her experiment.

Epigraphy.info ToolBox

VincentR: To back Francisca's idea, we should perhaps consider building a form to be sent to all the partners listed on epigraphy.info website, so that essential information about each project could be also provided (technology, standards used, tools being used or developed, ???).

Each project would have a record and an index could help people to find what they need (see for instance the Biblissima Toolbox: https://baobab.biblissima.fr/).

We probably should use the TaDirah (https://tadirah.info/) vocabularies (https://vocabs.dariah.eu/tadirah/en/), with extra things specific to epigraphy.

Form fields

- Language(s) and script(s)
- Type of edition (edition princeps, digital publication of printed edtion, …)
- Geographical scope
- Vocabulary used, developed
- Prosopography, onomastic (Yes/No)
- Database type (SQL, NoSql, existdb…)
- Online publication format (html, xml, rdf…)
- API?
- Github or similar repository for apps
- Github or similar repository for data
- Zenodo repo
