

World War I was a large-scale military conflict involving European nations, United States and other nations across the world. The war lasted from August 4, 1914 to November 11, 1918. More than 15 million people were killed and 20 million people were wounded, making it one of the most devastating conflicts ever. The war ended with the defeat of the German Empire, the Austro-Hungarian Empire, Ottoman Empire, and the Russian Empire. The League of Nations, an intergovernmental organization, was formed in the hope of preventing another such conflict, but it failed to prevent the World War II, a larger and deadlier global war that started in 1939.

Visit the following website: [World War I](#) and read the article, watch the videos and study the maps. When you have enough background knowledge, create a multi-flow map.

Assignment: Multi-Flow Map

Cause and effect is represented in a Multi-Flow Map. It is a process of sequencing that looks at what caused an event and the results/effects of the event. It helps students analyze a situation by looking at the cause and effect - the 'why' and 'consequences' - good or bad.

In the center rectangle, list the event that occurred. In the rectangle to the left, list the causes of the event. Write the effects/consequences of the event in the rectangles to the right of the center rectangle. If you are studying a system, you will find that there are effects in the system which, in turn, influence initial causes. This circular cause and effect relationship is called a feedback loop.

To submit your assignment online:

Write at least three causes of World War I.

The Event (in the middle of a visual map) is "World War I".

List at least three effects (consequences) of the event World War I.
