Parking Lot for questions/comments
IMMERSE In-person Training, 2024

Please add any questions or comments you might have during the in-person training to this google doc. We will be checking this regularly and will provide written responses (or address with the whole group)

- Weights. The use of weights (specifically with HSLS:09 and the follow-up studies); they seem to have changed/been integrated in recent years if anyone has quick info; else, I can read up and share what I find here later.

- Don't classify analyze. The paper that says you can classify/analyze when entropy is greater than .8 is the Clark & Muthen (2009), which is an unpublished paper. Remmeber, we don't suggest doing this depsite this paper saying so!
