

Type of the Paper: Case report

Title

The title should be specific, concise, and clear, if appropriate, the study design, e.g., Z is a risk factor for Y: a case report, a case series, etc. (Font: Source Sans Pro, 18 pt, Bold, Left-aligned). Please avoid abbreviations and formulae, where possible, unless they are established and widely understood, e.g., DNA).

Abstrak: Uraian singkat yang berisi gambaran secara menyeluruh mengenai paparan kasus yang mencakup gejala utama pasien, temuan klinis utama, diagnosis, intervensi, serta hasil utama. Bagian terakhir dari abstrak adalah kesimpulan. Abstrak ditulis dalam bahasa Indonesia dan bahasa Inggris yang masing-masing terdiri atas satu paragraf dengan maksimum 250 kata.

Abstract: (A single paragraph of about 250 words maximum. For a case report, abstracts should give a pertinent overview of the case presentation. Avoid non-standard or uncommon abbreviations. If any are essential to include, ensure they are defined within your abstract at first mention. We strongly encourage authors to use the following style of structured abstracts, with headings: (1) Background: Reason for reporting the case and its novelty; (2) Case presentation: Summary of the patient's clinical and demographic details, including main symptoms, key clinical findings, diagnosis, interventions, and primary outcomes; (3) Conclusion: Brief summary of the case's clinical impact or potential implications.

Keywords:

Include 3-7 keywords in alphabetical order, separated by semi-colons, after the abstract. (Font: Source Sans Pro, 10 pt, Italic, Left-aligned). Please avoid abbreviations and formulae unless they are established and widely understood, e.g., DNA

1. Introduction

The introduction should explain the general medical condition or relevant symptoms that will be discussed in the case report and the background of the case report. Clearly state the purpose of the study and its significance. Review the current state of the case field, citing key and up-to-date publications. Highlight controversial or diverging hypotheses where relevant. References should be numbered sequentially in the order of appearance and indicated by numerals in square brackets, such as (1), (2), or (3, 4), (5-7). You can refer to author names within your text, but always give the reference number, e.g., "as reported (2). Nur and Rahmawati (1,6)

¹ Affiliation 1; e-mail@mail.com

² Affiliation 2; e-mail@mail.com

* Correspondence: e-mail@mail.com (if there are multiple corresponding authors, add author initials)

obtained a different result”

2. Case Presentation

This section should cover relevant patient demographics, medical history, symptoms and signs, treatment or intervention, outcomes, and any other essential details.

Units, Classification Codes, Nomenclature, and Math Formulae:

Use the International System of Units (SI), which follows internationally accepted rules and conventions throughout your article (e.g. 1500 m dpl, 20°C).

Submit math equations as editable text, not as images.

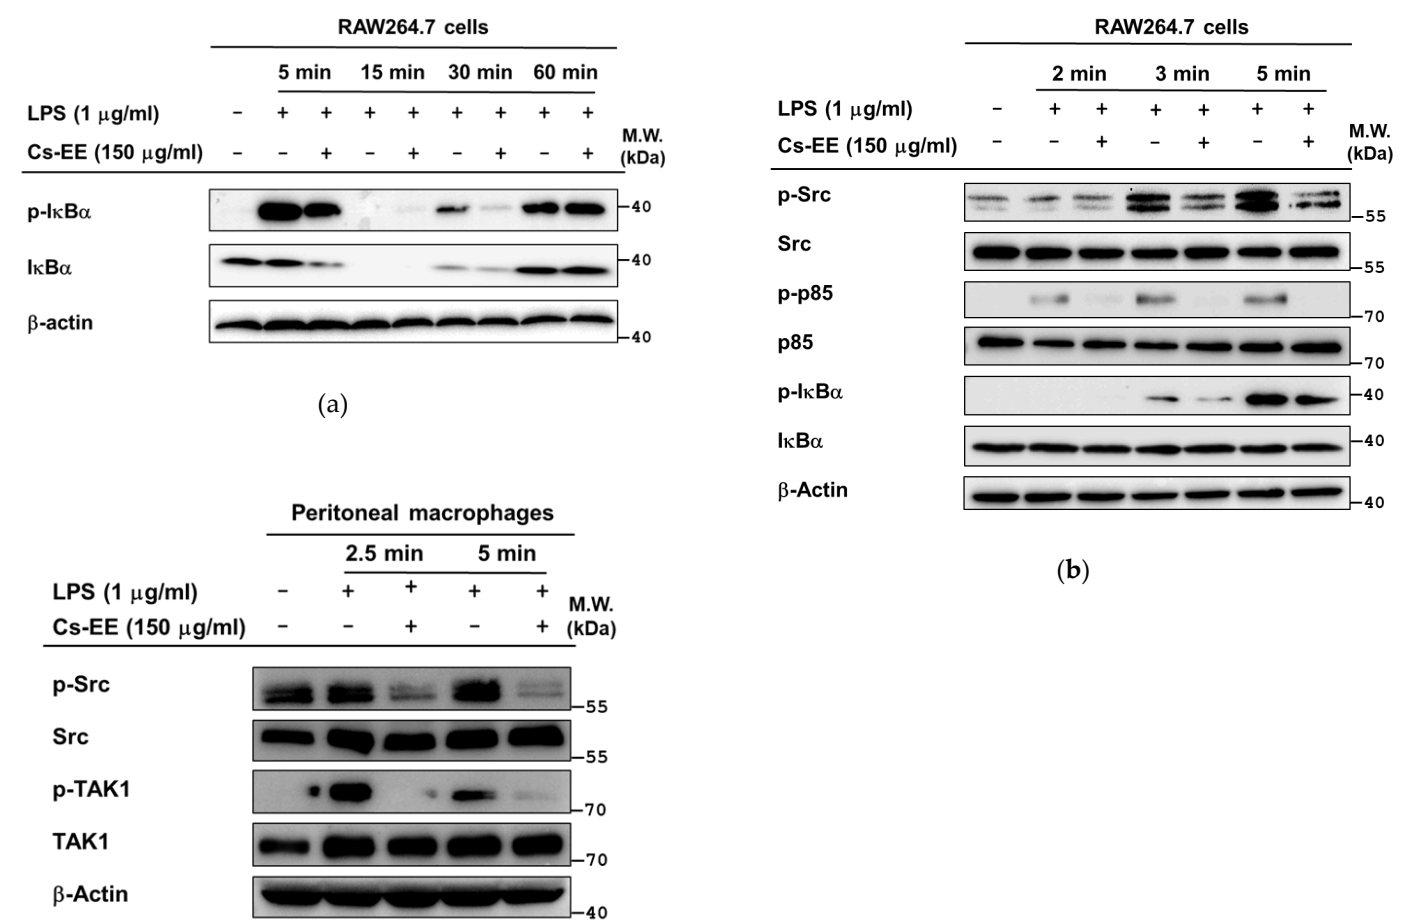

Use spacing appropriately between numbers and mathematical symbols (+, -, x, :). This also applies to units of measure (except for % and °C) should have a space between the number and the unit. For example, **15 µM** instead of 15µM or **24 h** instead of 24h, **1.5 kg** with a ratio of **2 : 1** in a **20 cm x 20 cm** polybag.

3. Discussion and Conclusions

Authors should discuss the results, their interpretation of previous studies, and the working hypotheses. The findings and their implications should be addressed in the broadest context possible. Additionally, clearly state the main conclusions, including an explanation of their relevance or importance to the field.

3.1. Figures, Tables and Schemes

All figures and tables should be cited in the main text as **Figure 1** (not “Fig.”), **Table 1**, etc., in bold font (not italic), followed by a period.

(c)

Figure 1. This is a figure. Schemes follow the same formatting. If there are multiple panels, they should be labeled as: (a) Description of the content in the first panel; (b) Description of the content in the second panel. The figures should be placed in the main text close to where they are cited. A caption on a single line should be centered.

Table 1. This is a table. Tables should be placed in the main text close to where they are first cited.

Title 1	Title 2	Title 3	Title 4
entry 1 *	data	data	data
	data	data	data
	data	data	data
entry 2	data	data	data
	data	data	data
entry 3	data	data	data
	data	data	data
entry 4	data	data	data
	data	data	data

* Tables may have a footer.

The text continues here (**Figure 2** and **Table 2**).

Acknowledgments: In this section, you can acknowledge any support given which is not covered by the author contribution or funding sections. This may include administrative and technical support or donations in kind (e.g., materials used for experiments).

Author Contributions: For research articles with several authors, a short paragraph should explain how each author contributed to the manuscript. The contributions can be stated as examples: conceived or designed the experiments, analyzed the data, performed the experiment, visualized the data, wrote the manuscript, etc. The following statements should be used “All authors have read and agreed to the published version of the manuscript.” Authorship must be limited to those who have contributed substantially to the work reported.

Funding: Please add: “This research received no external funding” or “This research was funded by the name of **funder, grant number XXX**”. Check carefully that the details are accurate and use the standard spelling of funding agency names at <https://search.crossref.org/funding>. Any errors may affect your future funding.

Conflicts of Interest: Declare conflicts of interest or state, “The authors declare no conflict of interest.” Authors must identify and declare any personal circumstances or interest that may be perceived as inappropriately influencing the representation or interpretation of reported research results. Any role of the funders in the design of the study; in the collection, analysis or interpretation of data, in the writing of the manuscript, or in the decision to publish the results must be declared in this section. If there is no role, please state, “The funders had no role in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript, or in the decision to publish the results”.

Informed Consent Statement: Any research article describing a study involving humans should contain this statement. Please add “Informed consent was obtained from all subjects involved in the study. Or “Not applicable.” for studies that do not involve humans. You might also exclude this statement if the study did not involve humans.

Supplementary Materials: The following is not mandatory but may be added if supplementary materials exist. The following are available online <https://journal.uny.ac.id/publications/jomassh>

List of Abbreviations

<i>TAK1</i>	Transforming growth factor- β -activated kinase 1
<i>NF-κB</i>	Nuclear factor- κ B
<i>AP-1</i>	Activator protein-1
<i>MAPKs</i>	Mitogen-activated protein kinases
<i>JNK</i>	c-Jun N-terminal kinase

References

References must be numbered in the order they appear in your article (including citations in tables and legends) and listed individually at the end of the manuscript. References should be one-spaced, in size 9 and Vancouver style. We recommend preparing the references with a bibliography software package, such as EndNote, Reference Manager or Zotero to avoid typing mistakes and duplicated references. Include the digital object identifier (DOI) for all references where available.
