

Kindergarten Curriculum Comparison for the New Alberta Curriculum

| N = Number | | P = Patterns | | M = Measurement | | T = Time | | G = Geometry | | F = Financial Literacy (Physical Education & Wellness) | | Organizing Idea | | Understanding row | | | |
|---|--|--------------|--|-----------------|--|---|--|--------------|--|---|--|--|--|--|--|--|--|
| Outcomes from 2007 Curriculum | | | | | | Understandings (NEW) | | | | | | Knowledge, Skills and Procedures (NEW) | | | | | |
| NUMBER | | | | | | NUMBER (N) | | | | | | | | | | | |
| Specific Outcome 1 Say the number sequence 1 to 10 by 1s, starting anywhere from 1 to 10 and from 10 to 1. | | | | | | LEARNING OUTCOME KN1.2a. Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.2a. Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.2a. Children investigate quantity to 10. | | | |
| | | | | | | UNDERSTANDING A quantity is always counted using the same sequence of words (counting principle: stable order). | | | | KNOWLEDGE Quantity can be determined by counting. | | | | SKILLS & PROCEDURES Count within 10, forward and backward, starting at any number, according to the counting principles. | | | |
| | | | | | | LEARNING OUTCOME KN1.3 Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.3 Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.3 Children investigate quantity to 10. | | | |
| | | | | | | UNDERSTANDING Quantity can be determined without counting. | | | | KNOWLEDGE A small quantity can be recognized at a glance (subitized). | | | | SKILLS & PROCEDURES Subitize quantities to 5. | | | |
| Specific Outcome 2 Subitize (recognize at a glance) and name familiar arrangements of 1 to 5 objects or dots. | | | | | | LEARNING OUTCOME KN1.1 Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.1 Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.1 Children investigate quantity to 10. | | | |
| | | | | | | UNDERSTANDING Quantity can be the number of objects in a set. | | | | KNOWLEDGE Quantity can be represented using <ul style="list-style-type: none">objectspictureswordsnumerals | | | | SKILLS & PROCEDURES Recognize a number of familiar objects as a quantity. Represent a quantity in different ways. Relate a numeral to a specific quantity. | | | |
| | | | | | | LEARNING OUTCOME KN1.2 b-e. Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.2 b-e. Children investigate quantity to 10. | | | | LEARNING OUTCOME KN1.2 b-e. Children investigate quantity to 10. | | | |
| | | | | | | UNDERSTANDING A quantity remains the same no matter the order in which the objects are counted (counting principle: order irrelevance). A quantity can be determined by counting each object in a set once and only once (counting principle: one-to-one correspondence). The last number used to count represents the quantity (counting principle: cardinality). Any quantity of like or unlike objects can be counted as a set (counting principle: abstraction). | | | | KNOWLEDGE Quantity can be determined by counting. | | | | SKILLS & PROCEDURES Count within 10, forward and backward, starting at any number, according to the counting principles. | | | |
| Specific Outcome 3 Relate a numeral, 1 to 10, to its respective quantity. | | | | | | LEARNING OUTCOME KN2.1 Children interpret compositions of quantities within 10. | | | | LEARNING OUTCOME KN2.1 Children interpret compositions of quantities within 10. | | | | LEARNING OUTCOME KN2.1 Children interpret compositions of quantities within 10. | | | |
| | | | | | | UNDERSTANDING A quantity remains the same no matter how the objects are grouped or arranged (counting principle: conservation). | | | | KNOWLEDGE Quantity can be arranged in various ways. | | | | SKILLS & PROCEDURES Identify a quantity in various groups or arrangements. Compose quantities within 10. Recognize various ways to make 5 and 10. | | | |
| Specific Outcome 4 Represent and describe numbers 2 to 10, concretely and pictorially. | | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | |

| | | | |
|--|--|--|--|
| Specific Outcome 5 Compare quantities 1 to 10, using one-to-one correspondence. | LEARNING OUTCOME KN1.4 Children investigate quantity to 10. UNDERSTANDING A quantity can be described relative to another quantity. A quantity can be described in relation to a purpose or need. | LEARNING OUTCOME KN1.4 Children investigate quantity to 10. KNOWLEDGE Comparisons of quantity can be described by using words such as <ul style="list-style-type: none">• more• less• same• enough• not enough | LEARNING OUTCOME KN1.4 Children investigate quantity to 10. SKILLS & PROCEDURES Compare the size of two sets using one-to-one correspondence. Describe quantities relative to each other using comparative language. Describe a quantity in relation to a purpose or need using comparative language. Solve problems in familiar situations by counting. |
| SHAPE & SPACE: MEASUREMENT | MEASUREMENT (M) | | |
| Specific Outcome 1 Use direct comparison to compare two objects based on a single attribute, such as length (height), mass (weight) and volume (capacity). | LEARNING OUTCOME KM1.1 Children explore size through direct comparison. UNDERSTANDING Size describes the amount of one measurable attribute of an object or a space. | LEARNING OUTCOME KM1.1 Children explore size through direct comparison. KNOWLEDGE Size can be interpreted in many ways (according to measurable attributes), such as: <ul style="list-style-type: none">• the length of an object• how much flat space an object covers (area)• how much a container holds (capacity)• the heaviness of an object (weight) | LEARNING OUTCOME KM1.1 Children explore size through direct comparison. SKILLS & PROCEDURES Identify measurable attributes of familiar objects to which size may refer. |
| | LEARNING OUTCOME KM1.2 Children explore size through direct comparison. UNDERSTANDING Size may refer to only one measurable attribute at a time. The size of two objects can be compared directly. The size of an object can be described in relation to a purpose or need. | LEARNING OUTCOME KM1.2 Children explore size through direct comparison. KNOWLEDGE Comparisons of size can be described by using words such as <ul style="list-style-type: none">• longer• shorter• heavier• lighter• too big• too small | LEARNING OUTCOME KM1.2 Children explore size through direct comparison. SKILLS & PROCEDURES Compare the length, area, weight, or capacity of two objects directly. Describe the size of an object in relation to another object, using comparative language. Describe the size of an object in relation to a purpose or need, using comparative language. |

| SHAPE & SPACE: 2-D SHAPES & 3-D OBJECTS | | GEOMETRY (G) | |
|---|---|--|---|
| <p>Specific Outcome 2 Sort 3-D objects, using a single attribute.</p> <p>Specific Outcome 3 Build and describe 3-D objects.</p> <p>PATTERNS & RELATIONS Specific Outcome 2 Sort a set of objects based on a single attribute, and explain the sorting rule.</p> | <p>LEARNING OUTCOME KG1.1 Children investigate shape.</p> <p>UNDERSTANDING Shape is structured two-dimensional or three-dimensional space.</p> | <p>LEARNING OUTCOME KG1.1 Children investigate shape.</p> <p>KNOWLEDGE A shape can be represented using objects, pictures, or words.</p> <p>Familiar two- and three-dimensional shapes can be found in nature, such as</p> <ul style="list-style-type: none"> • circles • triangles • cubes • cylinder <p>First Nations, Métis, and Inuit name specific shapes in relation to the natural world.</p> | <p>LEARNING OUTCOME KG1.1 Children investigate shape.</p> <p>SKILLS & PROCEDURES Relate shapes in the natural world to various two-dimensional and three-dimensional shapes.</p> <p>Identify familiar two- and three-dimensional shapes.</p> <p>Investigate three-dimensional shapes by rolling, stacking, or sliding.</p> <p>Describe a shape using words such as flat, curved, straight, or round.</p> |
| | | | |
| PATTERNS & RELATIONS - PATTERNS | | PATTERNS (P) | |
| <p>Specific Outcome 1 Demonstrate an understanding of repeating patterns (two or three elements) by:</p> <ul style="list-style-type: none"> • identifying • reproducing • extending • creating <p>patterns using manipulatives, sounds and actions.</p> | <p>LEARNING OUTCOME KP1.1 Children identify and create repeating patterns.</p> <p>UNDERSTANDING A pattern is characterized by how the elements change or remain constant.</p> | <p>LEARNING OUTCOME KP1.1 Children identify and create repeating patterns.</p> <p>KNOWLEDGE Patterns exist everywhere.</p> <p>A pattern can involve elements such as</p> <ul style="list-style-type: none"> • sounds • objects • pictures • symbols • actions <p>Repeating patterns have one or more elements that repeat.</p> | <p>LEARNING OUTCOME KP1.1 Children identify and create repeating patterns.</p> <p>SKILLS & PROCEDURES Recognize repeating patterns encountered in daily routines and play, including songs or dances.</p> <p>Recognize change or constancy between elements in a repeating pattern.</p> <p>Predict the next elements in a repeating pattern.</p> <p>Create a repeating pattern with up to three repeating elements.</p> |
| | | | |
| | | TIME (T) | |
| | <p>LEARNING OUTCOME KT1.1 Children interpret time as a sequence of events.</p> <p>UNDERSTANDING Time can be perceived as a sequence.</p> | <p>LEARNING OUTCOME KT1.1 Children interpret time as a sequence of events.</p> <p>KNOWLEDGE Sequence in time can be described in words, such as</p> <ul style="list-style-type: none"> • first • next • today <p>Ordinal numbers can indicate order in time.</p> | <p>LEARNING OUTCOME KT1.1 Children interpret time as a sequence of events.</p> <p>SKILLS & PROCEDURES Sequence events, limited to two events, according to time using words or ordinal numbers.</p> <p>Describe daily events as occurring yesterday, today, or tomorrow.</p> |
| | | | |

| | Physical Education and Wellness: Financial Literacy (F) | | |
