## D. BACKGROUND AND EXPERIENCE (type, size, scope of work, areas of specific expertise)

PROSVATION aims to bridge innovations with markets. To do so, THE ngo focuses on facilitating events and activities (such as conferences and webinars), building curriculums that could be implemented in educational organizations, and designing learning material and instructional platforms. Also, they help startups and SMEs *expand their networks and disseminate their products* in order to commercialize them, and reach a level of investor readiness!

### Expertise

As an organization, they have a rich portfolio of building learning platforms, designing learning material, doing research and need analysis, creating websites, and creating networks of interested trainees willing to learn new skills. Also, our team has plenty of experience in project management and product development from Private Sector projects and previous Erasmus+ Projects.

### Team

The team has great experience as individuals in implementing EU projects since we have been working on different organizations and institutions since 2017, but they decided to combine their strengths to make a bigger impact

through our project's outcomes. Over the last few years, they have managed to build a strong and healthy international network with partners all over the European Union and also a local micro-community of stakeholders like VET Schools, Universities, schools, SMEs, and a lot of startups that are willing to embed innovations but need help on finding them.

### Target group

PROSVATION is addressing to next generation by trying to build learning subjects that increase critical thinking, digital readiness, learnability, analytical thinking, etc, and to help vulnerable people (such as unemployed, non-educates, imprisoned, etc) increase their employability, both with soft skills but mostly on hard skills.
