

ITEMS AND COMMENTS MOVED TO GITLAB ISSUES, THIS DOCUMENT IS READ-ONLY

General comments

1. Citation of papers - is there any recommendation to use all 3? Just the first one?
Maybe we should add a note on what we'd suggest?
2. Publications - on several pages and at least 2y old:
 - <https://geant4.web.cern.ch/publications>
 - https://geant4.web.cern.ch/publications_validations/publications
3. Super old 'reports & presentation' - do we need it here? It requires **frequent** updates from everyone (or going through publication/presentation committee who adds it here)
 - https://geant4.web.cern.ch/publications_validations/reports_presentations
4. <https://geant4.web.cern.ch/node/68> is this integrated into documentation/user guides?
5. <https://geant4.web.cern.ch/sites/geant4.web.cern.ch/files/geant4/OOAandD/URD.pdf> is this our last "User requirements" document? Did JIRA replace it?
6. Validation
(https://geant4.web.cern.ch/publications_validations/testing_and_validation)
 - not clear that geant-val is our main validation portal.
 - G4-Med fits within, so should not be mentioned on equal level, but as a demonstration of geant-val application
 - EM physics points to EM WG
 - and hadronics points to <http://g4validation.fnal.gov:8080/G4HadronicValidation/> - didi it include all those thin target data? Or do we have only results for old version as e.g. <https://geant4.web.cern.ch/node/631>
 - HEP experiments related notes documents and notes (in collaboration with LCG Physics Validation Project) - non-existing links <http://ph-dep-sft.web.cern.ch/project/physics-validation>
 - The Geant4 testing system <https://sites.google.com/site/sttshifternaive/intro> seems to be internal-only site, should be somewhere on "Collaboration" internal pages, not for all users. It is our understanding that shifts do not cover physics validation which is the topic here.
 - documents like https://home.fnal.gov/~wenzel/g4val/g4hadronic_validation.ps should go to

some main collection of notes & papers (and also be moved to some common space?)

7. Add more (short) info on downloads - why is it recommended to get the last version, what is beta version, etc.
8. Download & release - why windows is zip/exe (what's the difference?), why only 32 bit builds
9. Steering board - add its role, description
10. Oversight board - add its role, are there any new minutes? Copying old ones suggests it does not meet anymore
11. Technical forum - role, some description

Comments from the meeting 16.11.2020

1. Restricted parts of the website
 - identify which parts and who needs access (e.g. SB members)
 - how to integrate it within Jekyll
 - can be a separate site with private git repo closed to SB members
 - .htaccess file to control mailing-list access (Alex shared details on how to set it up)
2. CERN requirements on hosted sites (e.g. logo) - where to find them?
3. Publications and presentations - how to keep it up to date? Publication board members should keep track of new content, maybe can be reminded at the end of each SB meeting
