

Download BP4Droid.zip. Unzip with and move the 2 folders (config and overlays) to your shields /storage/emulated/0/RetroArch/ folder. Then point your retroarch directories for config and overlays to /storage/emulated/0/RetroArch/config and /storage/emulated/0/RetroArch/overlays respectively.

Launch game!!!

To make your own .cfgs in the location of your choosing.

Use the pc installer to get the files. Then use notepad ++ to batch rename all files in both the config and the overlays folders form “:/overlays/ to “/where/you/want/them/on/android/overlays/

Then point your retroarch directories of configs and overlays to /where/you/want/them/on/android/overlays and /where/you/want/them/on/android/configs respectively
