

My Trip to the Science Center

By Student Name

Yesterday

Our class took the bus to the science center yesterday. We are studying Light and Sound in Science at school. I rode a bicycle that made a television work. The harder I rode, the brighter the picture. Then my friends and I played together in a big room with instruments. We made music. **We had fun!**

***M**y **F**avorite **T**hings*

This is a list of the things I liked at the science center.

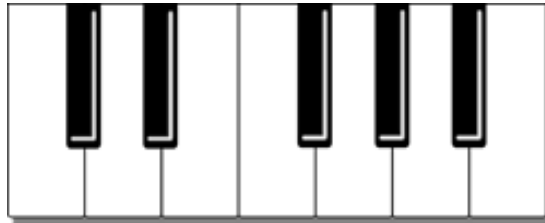

❖ touching the **plasma ball**

❖ watching my **heart rate** change

❖ walking on a huge **keyboard** to make music

My Facts

These are the facts I learned about light and sound.

1. Light refracts or bends when it travels through water.
2. Light sources can be natural such as the sun.

3. Light sources can be artificial such as a light bulb.
