Providing a high image resolution is essential to ensure good script quality. Give the image a more straightforward style and remove unnecessary background and lines (gridlines). If the image has more than 1 part, then the different parts are labeled with letters: a, b, c, etc. In the image legend, the letters in parentheses are placed at the beginning of the phrase that describes the part in question. Image captions must follow the same lines as the image numbers, and short description should be included under each image. The title must be understandable without reference to the text. Make sure that the symbols and abbreviations used in the text match those in the figures.

Discussion is the most important part of your article. Here you get a chance to sell your data. Make the discussion in accordance with the results, but not repeat the results. The following components that should be covered in the discussion are: How does the research result relate to the original question or objectives outlined in the Introduction section? Does the study provide a scientific interpretation for each of the results? Are your results consistent with what other researchers have reported (what else)?

4. CONCLUSIONS

(enter, single space, 11 pt)

The conclusion is written in Times New Roman with 12 pt size, space of 1.5. Conclusions are written clearly and succinctly in the form of paragraphs and must answer the purpose of the study. The conclusions should contribute to the current research on the progress of science and suggest subsequent experiments for progress from the field of study.
