GForce Software Launches Halogen FM – The Joy of FM, Without the Headaches

London, 24.06.25 – **GForce Software Ltd.** is proud to announce the release of **Halogen FM**, a fresh take on frequency modulation synthesis that strips away the complexity while retaining all the character, depth, and unpredictability that makes FM special.

For decades, FM synthesis has been beloved for its expressive power—but just as often avoided for its notoriously technical and unintuitive programming. **Halogen FM** changes that by making FM **fun, fast, and creatively rewarding**.

Discover Sound Through Play

At the heart of Halogen FM is the **Halogen Spark Core** — a generative sound source that produces unique, musical patches at the press of a button. Simply hit the **Spark** button to instantly generate a new, inspiring sound. Then, shape it using intuitive **macro controls** for **Timbre, Envelope Generators, Modulation**, and **FX**. Every twist brings subtle shifts or bold transformations, without the need to dive into complex programming.

For those who want deeper control, Halogen FM also offers full access to each **operator's parameters**, allowing you to fine-tune or experiment without losing creative momentum.

Instant Inspiration, Infinite Depth

Halogen FM makes sculpting original sounds fast and enjoyable. Its controls are designed to respond to instinct, not instruction — creating an ideal balance between **playability** and **depth**. Whether you're crafting soft pads, sharp plucks, or evolving textures, Halogen FM helps you stay in the creative flow.

Halogen FM – key features

- **Infinite patches, zero programming**
- **Halogen Spark core** with global and individual parameter randomisation
- **Over 320 expertly designed presets**
- **Two operators with unique tonal character**
- **Inspired by a hidden gem in Japanese FM synthesis**
- **Macro control** over Timbre, EG1, EG2, Modulation, and FX
- **Full operator access** for advanced editing
- **Mono and Polyphonic modes**
- **Fully scalable UI** and advanced preset browser
- **Custom reverb** and full CC MIDI mapping
- **Supports poly-aftertouch and poly-pitchbend**
