

# Part 1: Explorer

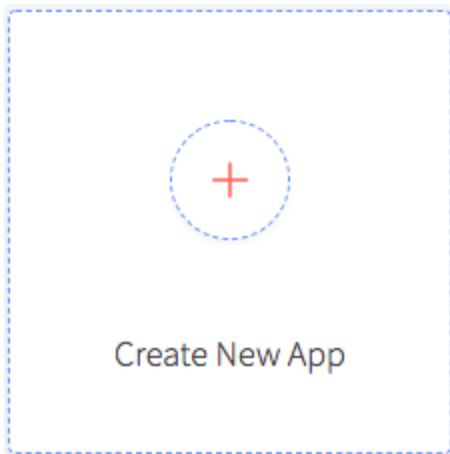

1. Go to <https://thunkable.com/#/>
2. Click **Log In** and Sign in with your SFUSD Google Account.

3. Click **Cross-Platform**.

4. Click (+) **Create New App**.

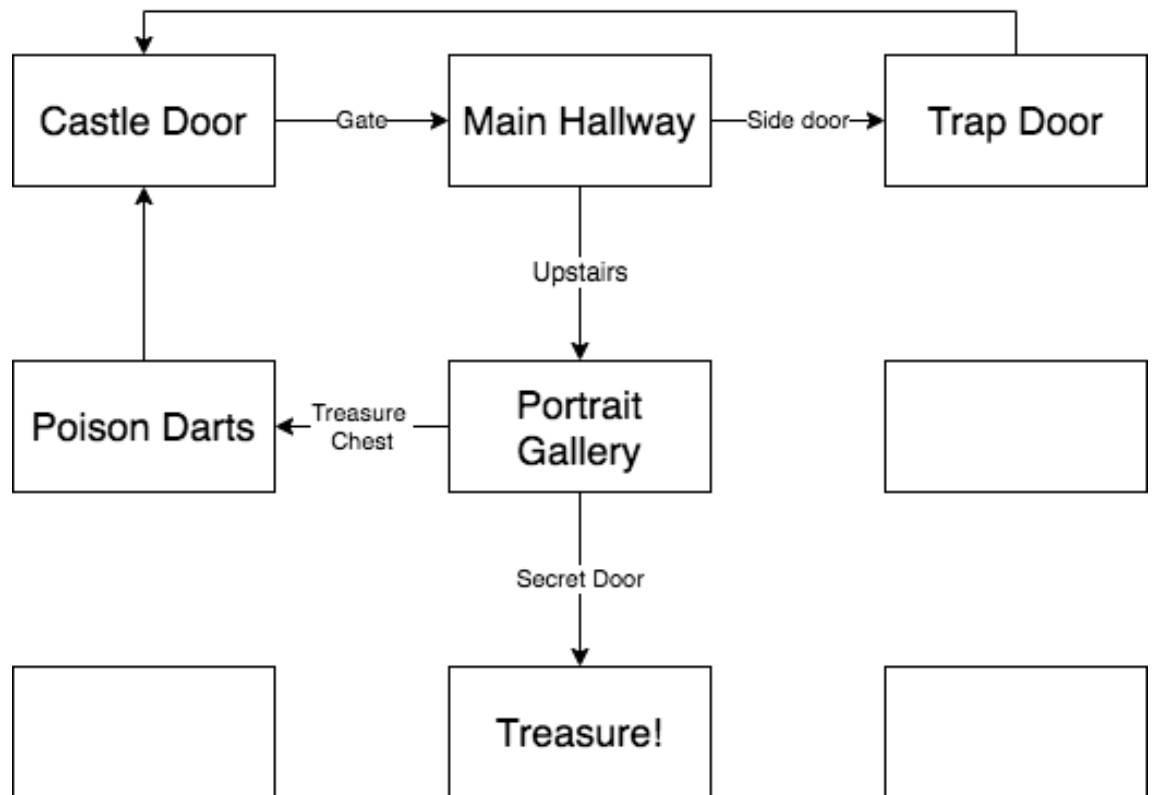

5. Name your project "**Explorer App**".

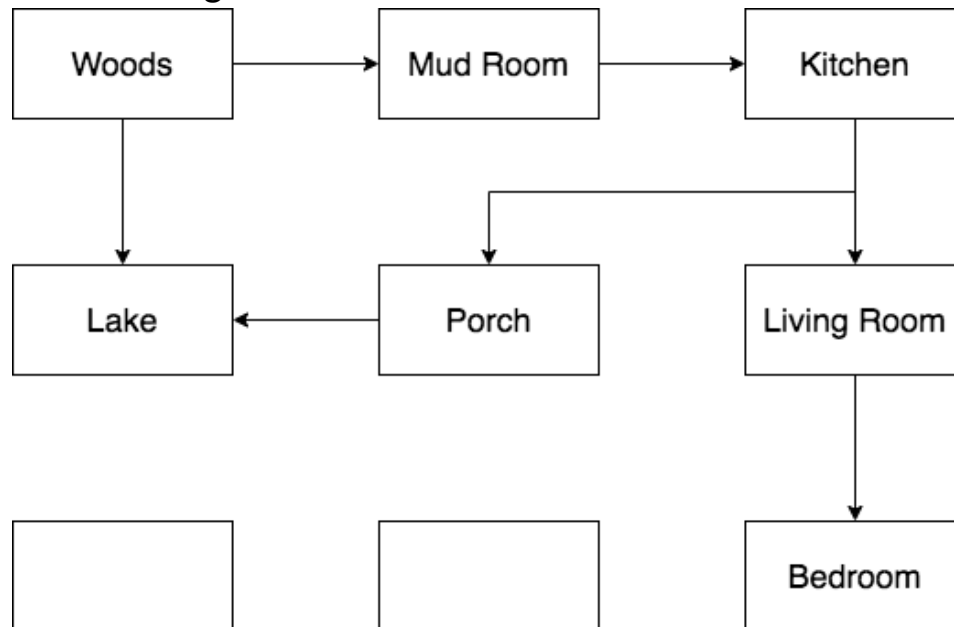

6. Fill out a blank explorer app. Each box is a screen that can be viewed. Some examples are included below:

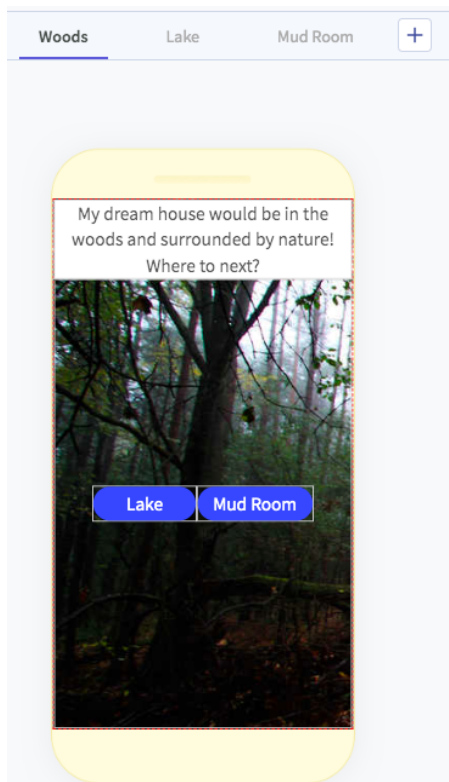

a. Haunted Mansion

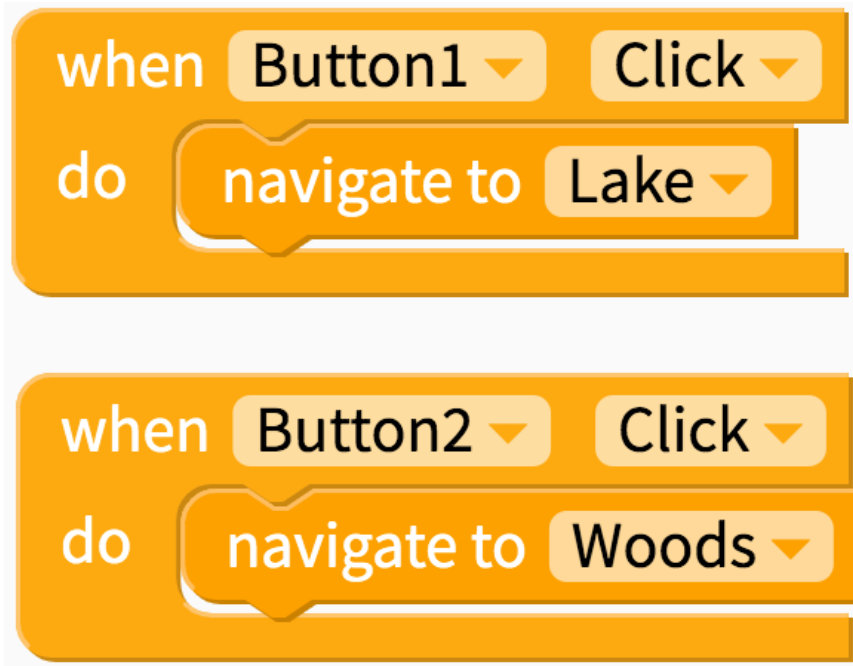

b. Mr. Whetung's Dream House

7. Create the screens for the “rooms” on your map. Include a button for each path you could take. Design them however you want, but **Images** and **Labels** are a good place to start. For example, in my dream home example you start in the **Woods** and can go to the **Lake** or the **Mud Room**.

8. Under **Blocks**, connect your screens using the **navigate** blocks:

9. Add a **Secret Room** to your app that is accessed with a code word, shaking the device, or a lock!
