Drone Logo Reflection

The drone logo was the easiest project I've done yet. It took me less than 30 minutes and I had no problems completing it. The new techniques I learned from this project were useful. The way I used boxes to cut out the circles is something I had not thought of and it is very useful. The copy and paste mechanics is something that I'll surely use again. Using the rotation tool to copy the blades was something that reduced time. It was very easy for me to complete this project in a timely manner. I already knew how to use inkscape so I had no problems doing this assignment. Most of the techniques used to create the logo I already knew how to do, so it was very simple to me. I never had to redo anything like I did with the caster project and everything went smoothly.
