Skills

Software Engineer II

(2023 – 2025)

@Hint Health

- Led “Locations & Providers Search” project from start to finish. Using PRD as a guide, completed the necessary technical research, explored several solutions, proposed the best strategy while listing tradeoffs, and communicated the project estimates to the team and stakeholders.
- Took over the “Disable Billing” project. Collaborated with product manager and design to ensure it was on track for delivery, created tickets with detailed technical notes, and gave thorough updates on status of the project.
- Brought two Senior engineers up to speed with Hint’s best practices and dev setup. Guided two product managers in the initial onboarding stages around QA-ing tickets given they were not yet fully familiar with the product.
- Wrote the Team Agreement document to avoid unstated team expectations, a recurring organizational problem in the past. It described agreed upon team practices and procedures, which continued to be referred to and adjusted as time passed.

Translations

Software Engineer II

(2021 – 2023)

@Eventbrite

- Led the initial stages of the Balance Service project, helping the team navigate technical ambiguity by doing research, coordinating with Senior+ engineers, and guiding the team to consensus on difficult decisions. Leveraged existing AWS knowledge to proactively pair with other developers, causing faster project ramp-up time.
- Developed training for new engineers on the subject of translations, covering topics such as Transifex integration, important concepts and technical limitations.
- Took initiative on the migration from custom legacy package management system to GitHub Packages, converting over 200 packages. Set team estimates, strategized and utilized cross-team collaboration which resulted in saved developer time considering previously teams were forced to manually keep packages up to date.
- Onboarded and mentored two mid-level engineers onto the team. Introduced them to Eventbrite and ensured a successful transition.

Software Engineer

(2020 – 2021)

@Mapped

- Shipped major frontend projects that aligned with business goals on customer-facing dashboard and marketing site. Built pixel-perfect UIs with emphasis on performance and accessibility.
- Managed a team of technical contractors, making sure they're well supported and can produce work according to the company's standards.
- Implemented an E2E testing strategy targeting critical user workflows using the Cypress testing framework.

Software Engineer

(2019 – 2020)

@GreenPark Sports

- Owned the development and maintenance of an in-game administrative dashboard that allowed the product team to tweak game settings and inner business rules. This saved GreenPark thousands of dollars on engineering time in the long run.
- Designed and developed API endpoints for the backend microservice based architecture written in Go.
- Took initiative in identifying system improvements on both frontend and backend. Resulting in a faster initial load time and improved user experience.
