

Cassandra Site Updates

<https://cassandra.staged.apache.org/>

THURSDAY:

1) Homepage

- Replace sig meeting with Rahul blog post - push to top post - move others down

Rahul

Then changelog 7?

Then backpressure?

Should the links open a new tab and should images link to each article as well?

~~Case Studies~~

1) <https://diginomica.com/gay-social-networking-app-hornet-upgrades-cassandra-improve-community-experience>

~~Quote - This is probably going to be the most engineering non-answer ever, which is simply that I haven't really had to care about Cassandra since we made the changes and upgrades. Usually if I was getting paged in the middle of the night, it probably had something to do with a brief Cassandra blip that was causing an increased response time. That has just gone away completely.~~

4) ~~ADD TO ECOSYSTEM - TOOLS~~

~~-- need to write:~~

~~Hi, I am new to the community and have been lurking. I am with the Azure Cassandra team and we have started work on a dual write proxy to aid in migrations:~~

~~<https://github.com/Azure-Samples/cassandra-proxy> It's still early so we incubated it on our site but we are happy to move to Apache or other appropriate places. Also any help + suggestions are welcome~~

4.0 preparation
