Wordpress :: Plugins

 SMX-8-UF3-A3.1 - Programació

Introduction

WordPress powers 43% of all the websites on the Internet, including those without a [content management system](#) (CMS) or with a custom-coded CMS. Or to put it another way, WordPress powers over one-third of the web! And if you limit the data set to only websites with a known CMS, WordPress' market share gets even more dominant.

In that case, WordPress holds a 65% market share for content management systems on websites with a known CMS. How does that compare to the market share of other popular content management systems? Let's take a peek:

	% All Websites	% CMS Market
WordPress	43	65
Joomla	2.6	4.6
Drupal	1,7	2.0
Squarespace	1.5	2.7
Wix	1.3	2.3

While much has been made of hosted website builder tools like [Squarespace](#) and [Wix](#), the numbers show that WordPress isn't in any danger of being dethroned any time soon! And WordPress also holds a dominant position over [Joomla](#) and [Drupal](#), two other popular self-hosted content management systems.

Is WordPress' market share still growing?

Yes! WordPress' market share isn't just "still growing", it's actually been consistently growing at roughly the same rate for as long as we have data. So how quickly is WordPress growing?

Here's WordPress' overall market share going all the way back to 2011, [according to W3Techs](#):

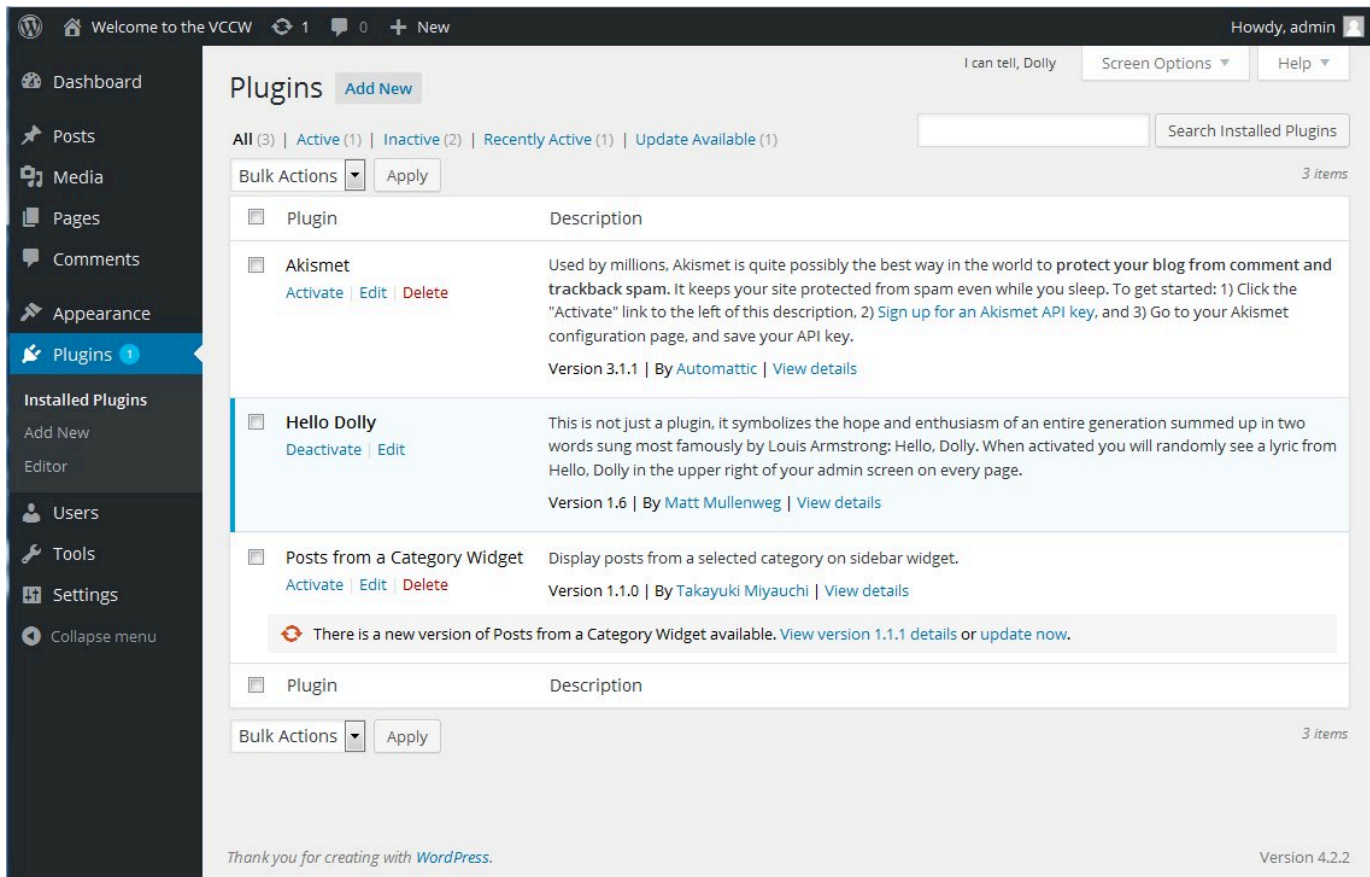

2011	2012	2013	2014	2015	2016	2017	2018	2019
13.1%	15.8%	17.4%	21.0%	23.3%	25.6%	27.3%	32.0%	43%

Plugins

Plugins are ways to extend and add to the functionality that already exists in WordPress.

The core of WordPress is designed to be lean and lightweight, to maximize flexibility and minimize code bloat. Plugins offer custom functions and features so that each user can tailor their site to their specific needs.

Plugins are also known as add-ons or extensions. They are software scripts that add functions and events to your website. They cover the gamut from up-to-date weather reports to simple organization of your posts and categories. Plugins are designed by volunteer contributors and enthusiasts who like challenges and problem solving. They are usually fairly simple to install through the WordPress Admin Plugin Screen, just follow the instructions provided by the plugin author. Remember, these are free and non-essential. If you have any problems with plugins, contact the plugin author's website or plugin source first, then search the Internet for help with that specific plugin, and if you haven't found a solution, then visit the WordPress forums for more help.

Admin Plugin Screen

Default Plugins

The following two plugins are included with WordPress core:

1. [Akismet](#) checks your comments against the Akismet web service to see if they look like spam or not. You can review the spam it catches under “Manage” and it automatically deletes old spam after 15 days.
2. **Hello Dolly** This is not just a plugin, it symbolizes the hope and enthusiasm of an entire generation summed up in two words sung most famously by Louis Armstrong: Hello, Dolly. This is, by the way, the world’s first official WordPress Plugin. When enabled you will randomly see a lyric from “Hello, Dolly” in the upper right of your Administration Screens on every page.

Plugin Repositories

WordPress Plugins are available from several sources. The most popular and official source for WordPress Plugins is the WordPress.org repo.

- [Official WordPress Plugins Repository](#)

Although plugins you find here are thoroughly tested and considered safe to use, they are of varying quality and are often works in progress.

Just to note, not all WordPress Plugins make it into the above repository. Search the web for “WordPress Plugin” and the keywords for the type of functionality you are seeking. There is bound to be a solution out there for you.

Manage Plugins

The WordPress content management system software, or WordPress core, provides the primary functionality for publishing content and managing users. Each WordPress plugin is an additional piece of software that can be easily installed to extend the functionality of WordPress core.

This allows you to customize your WordPress site with your desired functionality. Since so much functionality is provided through plugins, WordPress core is full-featured and customizable, without having to include everything for everyone.

Some of the more popular plugins in the [WordPress Plugin Directory](#) fall into these categories:

- Spam control
- SEO
- Data import and export
- E-commerce
- Security
- Caching

This is just a small sample. There are thousands of plugins available in the directory, so there’s a good chance you’ll find some that are useful to you.

Finding Plugins

You can browse and search for plugins in the [WordPress Plugin Directory](#). Each plugin listed there is available for download as a zip file you can upload to your WordPress site.

An alternative way to find and install plugins is from within the WordPress admin screens. Navigate to **Plugins > Add New**, and you can browse and search for plugins from within your dashboard.

The screenshot shows the WordPress 'Add Plugins' interface. On the left is a dark sidebar with navigation links: Dashboard, Posts, Media, Pages, Comments (3), Appearance, **Plugins**, Installed Plugins, Add New, Plugin Editor, Users, Tools, Settings, and Collapse menu. The main content area is titled 'Add Plugins' with an 'Upload Plugin' button. Below this are tabs for Beta Testing, Featured, Popular, Recommended, and Favorites. A search bar with a 'Keyword' dropdown and 'Search plugins...' text is present. A notice states: 'You are using a development version of WordPress. These feature plugins are also under development. [Learn more.](#)'

The plugins displayed are:

- Gutenberg**: The Gutenberg plugin provides editing, customization, and site building features to WordPress. This beta plugin allows you to test bleeding-edge featu ... By Gutenberg Team. 300,000+ Active Installations. Last Updated: 24 hours ago. Compatible with your version of WordPress.
- Two-Factor**: Enable Two-Factor Authentication using time-based one-time passwords (OTP, Google Authenticator), Universal 2nd Factor (FIDO U2F, YubiKey), email and ... By Plugin Contributors. 30,000+ Active Installations. Last Updated: 2 months ago. Compatible with your version of WordPress.
- Preferred Languages**: Choose languages for displaying WordPress in, in order of preference. By Pascal Birchler. 300,000+ Active Installations. Last Updated: 24 hours ago. Compatible with your version of WordPress.
- Application Passwords**: Creates unique passwords for applications to authenticate users without revealing their main passwords. By George Stephanis. 30,000+ Active Installations. Last Updated: 2 months ago. Compatible with your version of WordPress.

Each plugin listed there has an “Install Now” button so you can easily add it to your site.

Plugin Compatibility

If a plugin hasn’t been updated since the most recent update to WordPress core, it may be incompatible, or its compatibility may be unknown. You can view compatibility information about plugins from the Add Plugins page, or from the Installed Plugins list.

Compatibility of New Plugins

To learn about the compatibility of a plugin before you install it, navigate to **Plugins > Add New**. Each plugin description on this page includes a note that reads “Compatible with your version of WordPress” or “Untested with your version of WordPress.” You can click the “More Details” link to see information about this plugin’s compatibility.

The screenshot shows a detailed view of the Jetpack plugin card. It includes the Jetpack logo (a green circle with a white lightning bolt), the title 'Jetpack – WP Security, Backup, Speed, & Growth', and a description: 'Improve your WP security with powerful one-click tools like backup and malware scan. Get essential free tools including stats, CDN and social sharing.' The author is 'By Automattic'. The card also shows a star rating of 4.5 stars (1,629 reviews), '5+ Million Active Installations', and 'Last Updated: 4 weeks ago'. A green checkmark indicates it is 'Compatible with your version of WordPress'.

Compatibility of Installed Plugins

To learn about the compatibility of plugins you've already installed, click the "Plugins" link in the left nav of your site's dashboard. Each item on this list should contain a "View details" link. Click this to see information about this plugin's compatibility with different versions of WordPress.

Warning: This plugin has **not been tested** with your current version of WordPress.

Requires WordPress Version: 3.6
or higher

Compatible up to: 4.7.5

Installing Plugins

There are 3 ways to install WordPress plugins.

Automatic Plugin Installation. Any plugin available in the WordPress Plugins Directory can be installed via the built-in plugin installer.

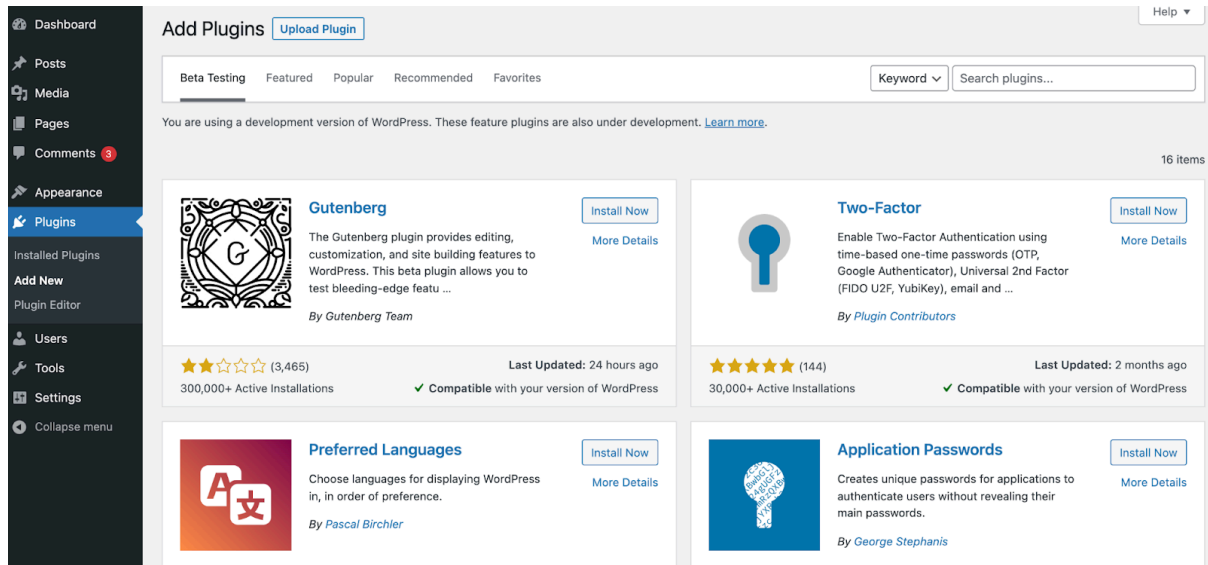

Upload via WordPress Admin. You can easily add a new plugin by uploading a zip archive of the plugin from your local computer.

Manual Plugin Installation. In some cases, you may need to manually upload a plugin directly using an SFTP client.

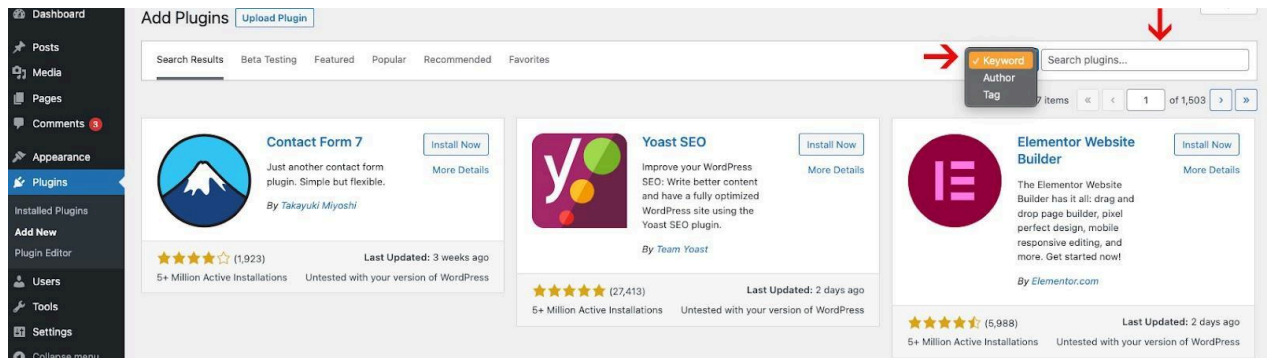

Automatic Plugin Installation

This is the simplest method of installing a plugin. To add a plugin using the built-in plugin installer:

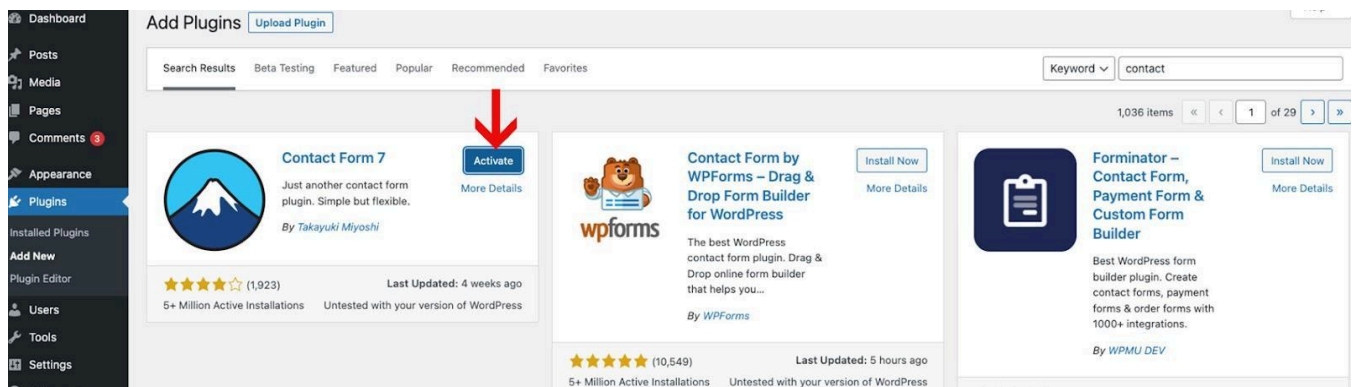

1. Navigate to **Plugins > Add New**.

2. Use the search form in the top-right to search by keyword, author, or tag.

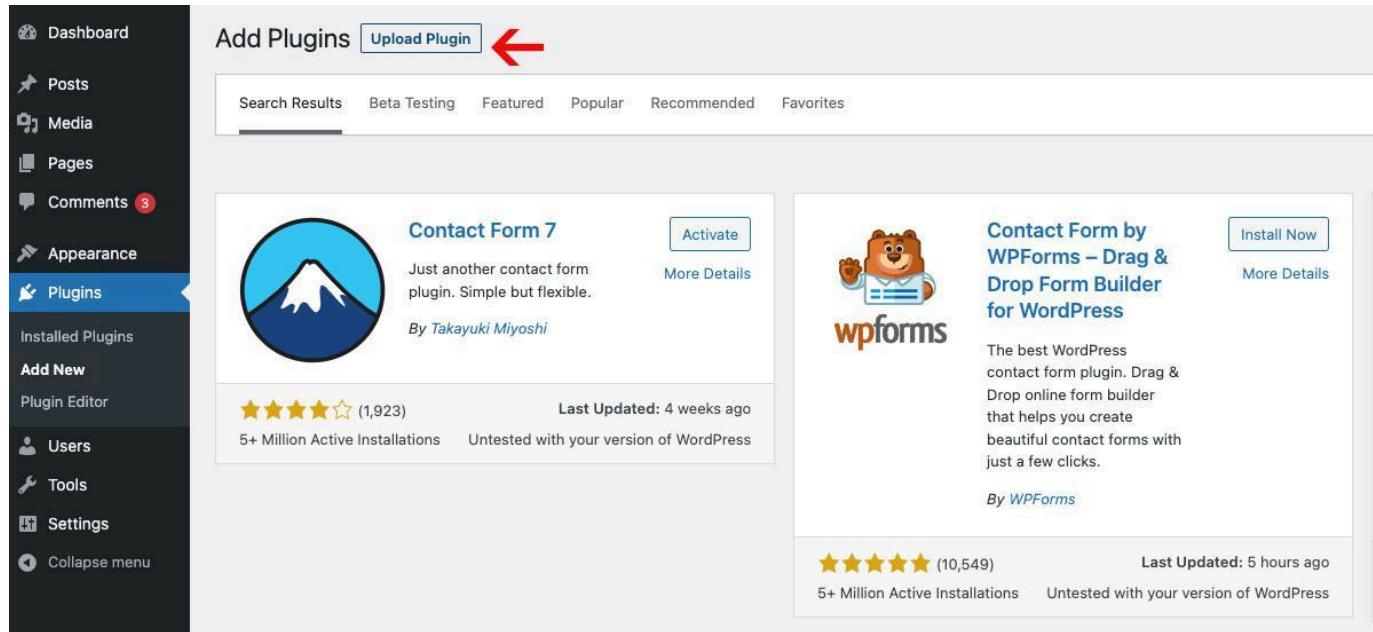

3. On the search results that appear, click a plugin's title or the link 'More Details' to read more about it, including installation notes, plugin documentation, or other useful information.
4. Click the **Install Now** button to install the plugin.
5. Once the plugin installation is complete, click **Activate** to activate the plugin.

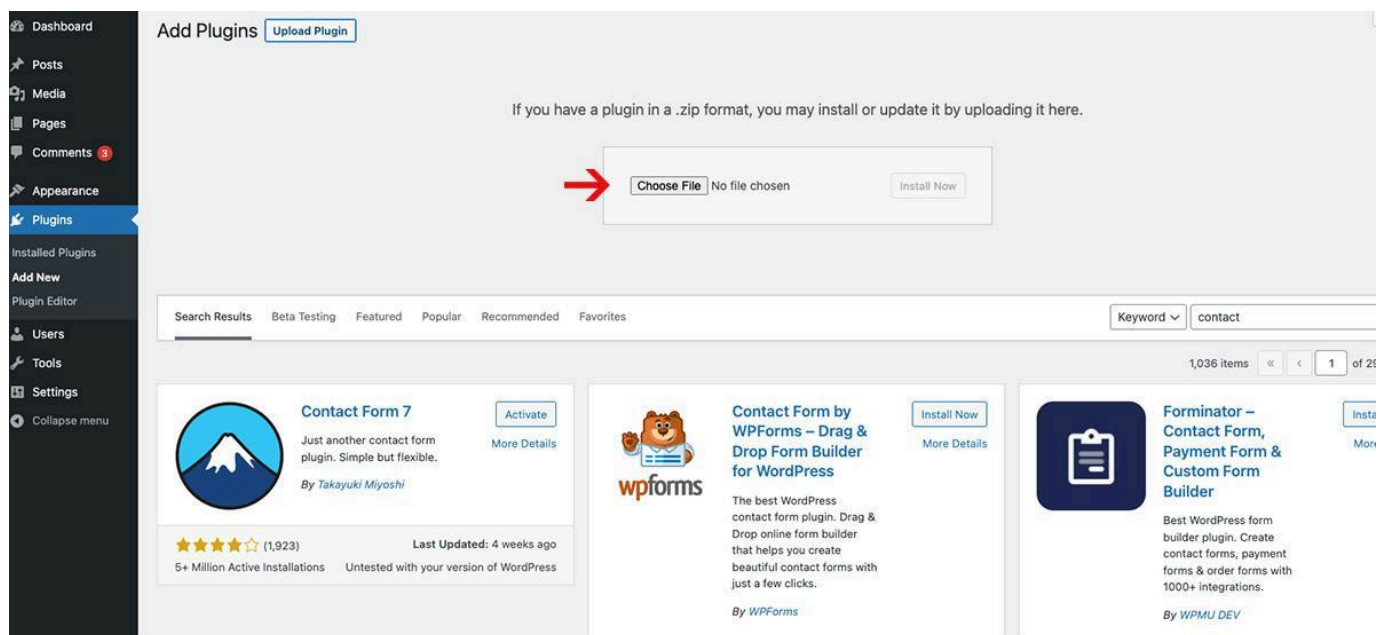

Upload via WordPress Admin

If you have a copy of the plugin as a zip file, you can manually upload it and install it through the Plugins admin screen.

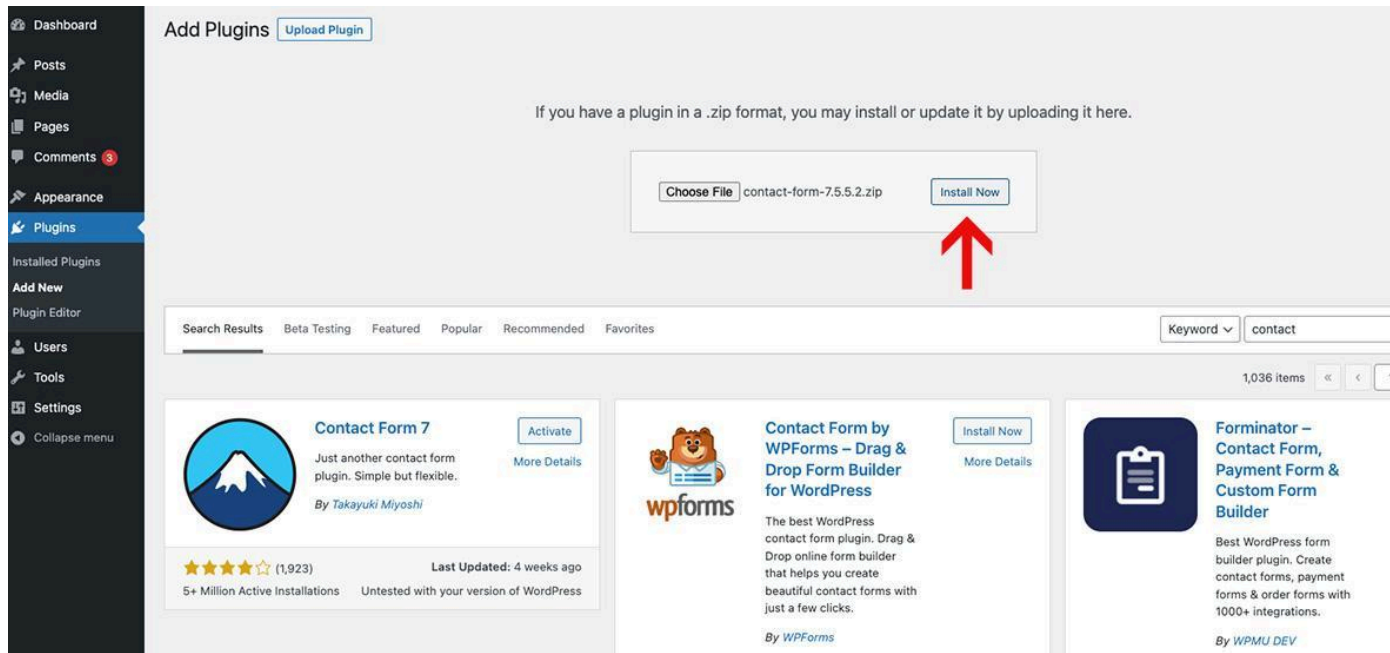

1. Navigate to **Plugins > Add New**.
2. Click the **Upload Plugin** button at the top of the screen.

3. Select the zip file from your local filesystem.

4. Click the **Install Now** button.

- When the installation is complete, you'll see "Plugin installed successfully." Click the **Activate Plugin** button.

Manual Plugin Installation

In rare cases, you may need to install a plugin by manually transferring the files onto the server. This is recommended only when absolutely necessary, for example when your server is not configured to allow automatic installations.

This procedure requires you to be familiar with the process of transferring files using an SFTP client. It is recommended for advanced users and developers.

Updating Plugins

Plugin developers update their plugins occasionally by adding new features, improving code quality, and keeping them secure. To ensure that these changes are applied on your site immediately, you should keep your WordPress plugins up to date. This helps to improve your site's WordPress security and performance.

Manual Plugin Update From The Dashboard

Your WordPress Dashboard automatically notifies you when a plugin needs to be updated – you can view this notification under the **Dashboard->Updates** tab.

WordPress Updates

Here you can find information about updates, set auto-updates and see what plugins or themes need updating.

Current version: 5.8.1-alpha-51466
Last checked on November 18, 2021 at 10:35 pm. [Check again.](#)

This site is automatically kept up to date with maintenance and security releases of WordPress only.

An updated version of WordPress is available.

Important: Before updating, please [back up your database and files](#). For help with updates, visit the [Updating WordPress](#) documentation page.

You can update to the latest nightly build manually:

[Update to version 5.8.2](#)

[Re-install version 5.8.2](#)

While your site is being updated, it will be in maintenance mode. As soon as your updates are complete, this mode will be deactivated.

Plugins (2)

The following plugins have new versions available. Check the ones you want to update and then click "Update Plugins".

[Update Plugins](#)

1. Scroll down to the Plugins section.

Plugins (2)

The following plugins have new versions available. Check the ones you want to update and then click "Update Plugins".

Update Plugins

☒ Select All

☒  **Advanced Custom Fields**
You have version 5.11 installed. Update to 5.11.1. [View version 5.11.1 details.](#)
Compatibility with WordPress 5.8.1: 100% (according to its author) | Automatic update scheduled in 2 hours.

☒  **Yoast Duplicate Post**
You have version 4.1.2 installed. Update to 4.2. [View version 4.2 details.](#)
Compatibility with WordPress 5.8.1: 100% (according to its author)

☒ Select All

Update Plugins

2. Select the checkbox for the plugins you want to update and then click 'Update Plugins' button.

NOTE: Always make sure you have a current backup of your site before updating your plugins. Sometimes problems can happen during the update process.

Manual Plugin Update From The Plugins Page

You can find the plugins that need to be updated on your site's Plugins page.

To find any plugins installed on your site that need to be updated:

1. Click the "Plugins" link in the left nav of your site's dashboard.
2. Look down the list of installed plugins for any that include a line reading "There is a new version..."
3. Click the "View version..." link in that note to view details about the plugin's update.
4. Click the "update now" link to update the plugin.

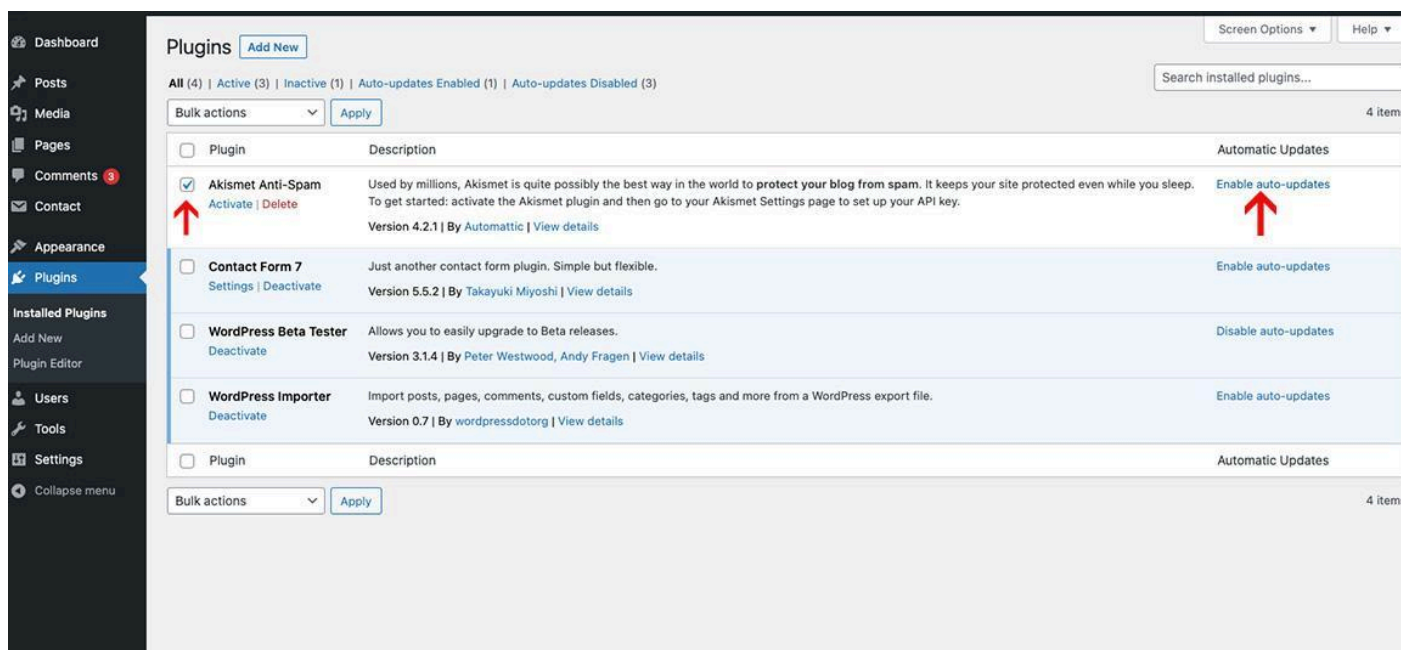

The screenshot shows the WordPress dashboard's 'Plugins' page. On the left, the 'Plugins' menu item is highlighted with a red notification badge. The main area displays the 'Akismet Anti-Spam' plugin. It includes a checkbox to deactivate it, the plugin's name, and links to 'Activate' and 'Delete'. A description of the plugin's functionality is provided, along with the current version (4.1) and the developer (Automattic). A yellow banner at the bottom of the plugin entry states: 'There is a new version of Akismet Anti-Spam available. [View version 4.1.11 details](#) or [update now](#).'

NOTE: Always make sure you have a current backup of your site before updating your plugins. Sometimes problems can happen during the update process.

Enable Automatic Plugin Update

WordPress introduced automatic updates for WordPress plugins in WordPress 5.5. This allows you to enable automatic updates for individual WordPress plugins directly from the Plugins Page in the WordPress dashboard.

1. Go to **Plugins -> Installed Plugins** page inside WordPress Admin area. Here you'll see the list of all your installed plugins. Each plugin in the list has a link 'Enable auto-updates' in the right-most column (under Automatic Updates).
2. Select the checkbox for the plugins you want to enable auto-update and click the link 'Enable auto-updates' for the selected plugin. This will enable automatic updates for the selected plugin.

Disable Automatic Plugin Update

To stop your plugins from updating automatically, do the following:

1. Go to **Plugins -> Installed Plugins** page inside WordPress Admin area. Here you'll see the list of all your installed plugins.
2. Each plugin in the list that has auto-update enabled will have a link 'Disable auto-updates' in the right-most column (under Automatic Updates).
3. Select the checkbox for the plugin you want to disable auto-update and click the link 'Disable auto-updates' for the selected plugin. This will disable automatic updates for the selected plugin.

The screenshot shows the WordPress 'Plugins' page. On the left is a sidebar menu with options like Dashboard, Posts, Media, Pages, Comments, Contact, Appearance, Plugins (selected), Installed Plugins, Add New, Plugin Editor, Users, Tools, Settings, and Collapse menu. The main content area is titled 'Plugins' and includes a search bar and filters for 'All (4)', 'Active (3)', 'Inactive (1)', 'Auto-updates Enabled (1)', and 'Auto-updates Disabled (3)'. Below this is a table of installed plugins:

Plugin	Description	Automatic Updates
<input checked="" type="checkbox"/> Akismet Anti-Spam Activate Delete	Used by millions, Akismet is quite possibly the best way in the world to protect your blog from spam . It keeps your site protected even while you sleep. To get started: activate the Akismet plugin and then go to your Akismet Settings page to set up your API key. Version 4.2.1 By Automattic View details	Enable auto-updates
<input type="checkbox"/> Contact Form 7 Settings Deactivate	Just another contact form plugin. Simple but flexible. Version 5.5.2 By Takayuki Miyoshi View details	Enable auto-updates
<input type="checkbox"/> WordPress Beta Tester Deactivate	Allows you to easily upgrade to Beta releases. Version 3.1.4 By Peter Westwood, Andy Fragen View details	Disable auto-updates (indicated by a red arrow)
<input type="checkbox"/> WordPress Importer Deactivate	Import posts, pages, comments, custom fields, categories, tags and more from a WordPress export file. Version 0.7 By wordpressdotorg View details	Enable auto-updates

At the bottom of the table, there are bulk action controls: a 'Bulk actions' dropdown menu and an 'Apply' button.

Bulk Update WordPress Plugins

If you have several plugins on your website that need an update, then you can bulk update those plugins. It is always recommended to do a quick review of all the plugins before updating.

1. Go to the Plugins page and click on the 'Update Available' link. This will show you the list of all plugins that have updates available.

The screenshot shows the WordPress dashboard's 'Plugins' section. On the left sidebar, the 'Plugins' menu item is highlighted with a badge showing '2'. The main content area displays a list of installed plugins. At the top, there are filters: 'All (20)', 'Active (14)', 'Inactive (6)', 'Update Available (2)', 'Must-Use (1)', 'Drop-ins (2)', and 'Auto-updates Enabled (12)'. A red arrow points to the 'Update Available (2)' link. Below the filters, there are 'Bulk actions' and 'Apply' buttons. The plugin list shows two plugins with update notifications:

Plugin	Description
<input type="checkbox"/> WordPress Beta Tester Deactivate	Allows you to easily upgrade to Beta releases. Version 3.1.1 By Peter Westwood , Andy Fragen View details
There is a new version of WordPress Beta Tester available. View version 3.1.4 details or update now .	
<input type="checkbox"/> Yoast Duplicate Post Activate Delete	The go-to tool for cloning posts and pages, including the powerful Rewrite & Republish feature. Version 4.1.2 By Enrico Battocchi & Team Yoast View details Documentation
There is a new version of Yoast Duplicate Post available. View version 4.2 details or update now .	

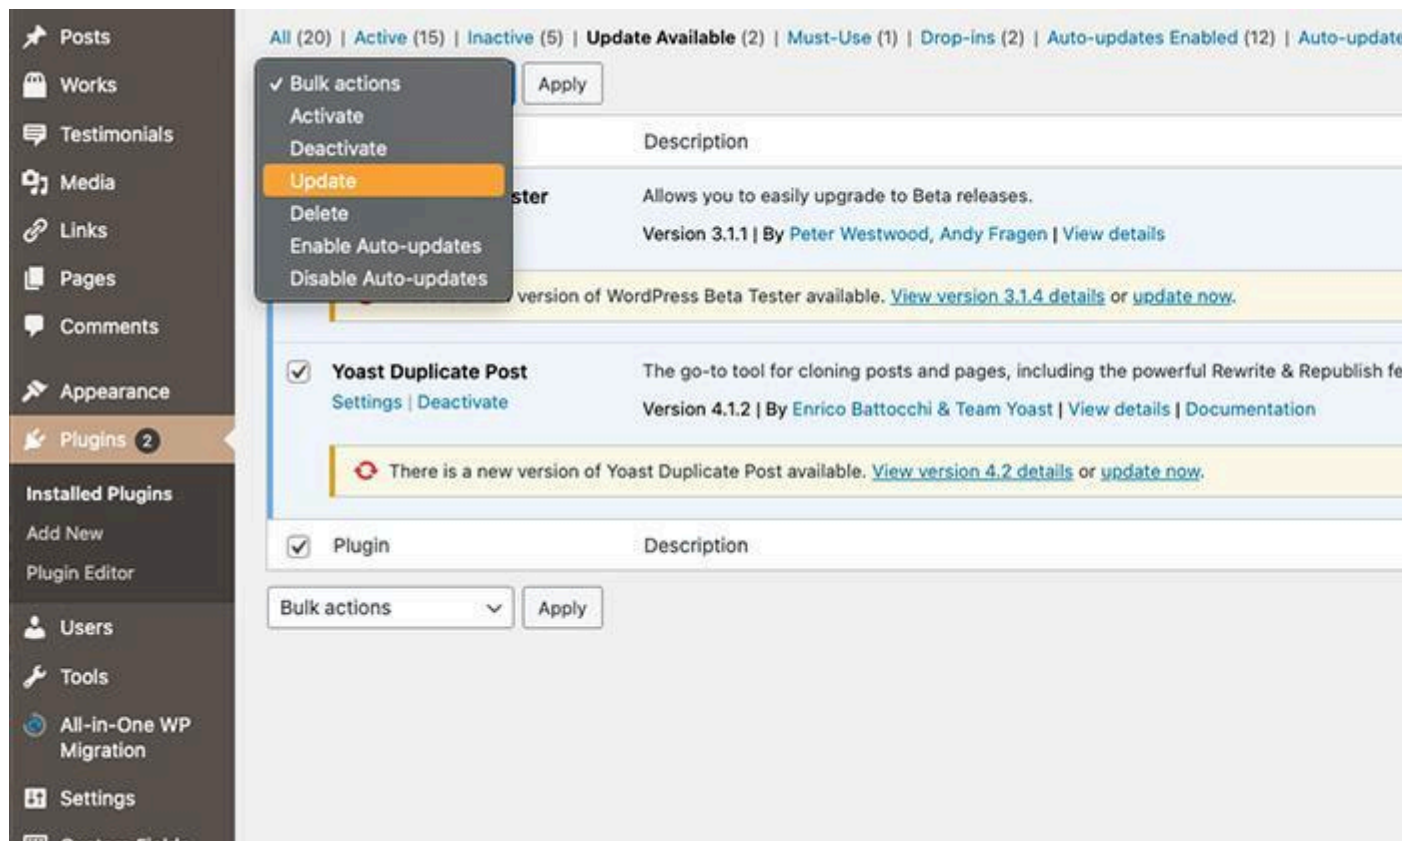

2. Click the checkbox to select all the plugins you want to update.

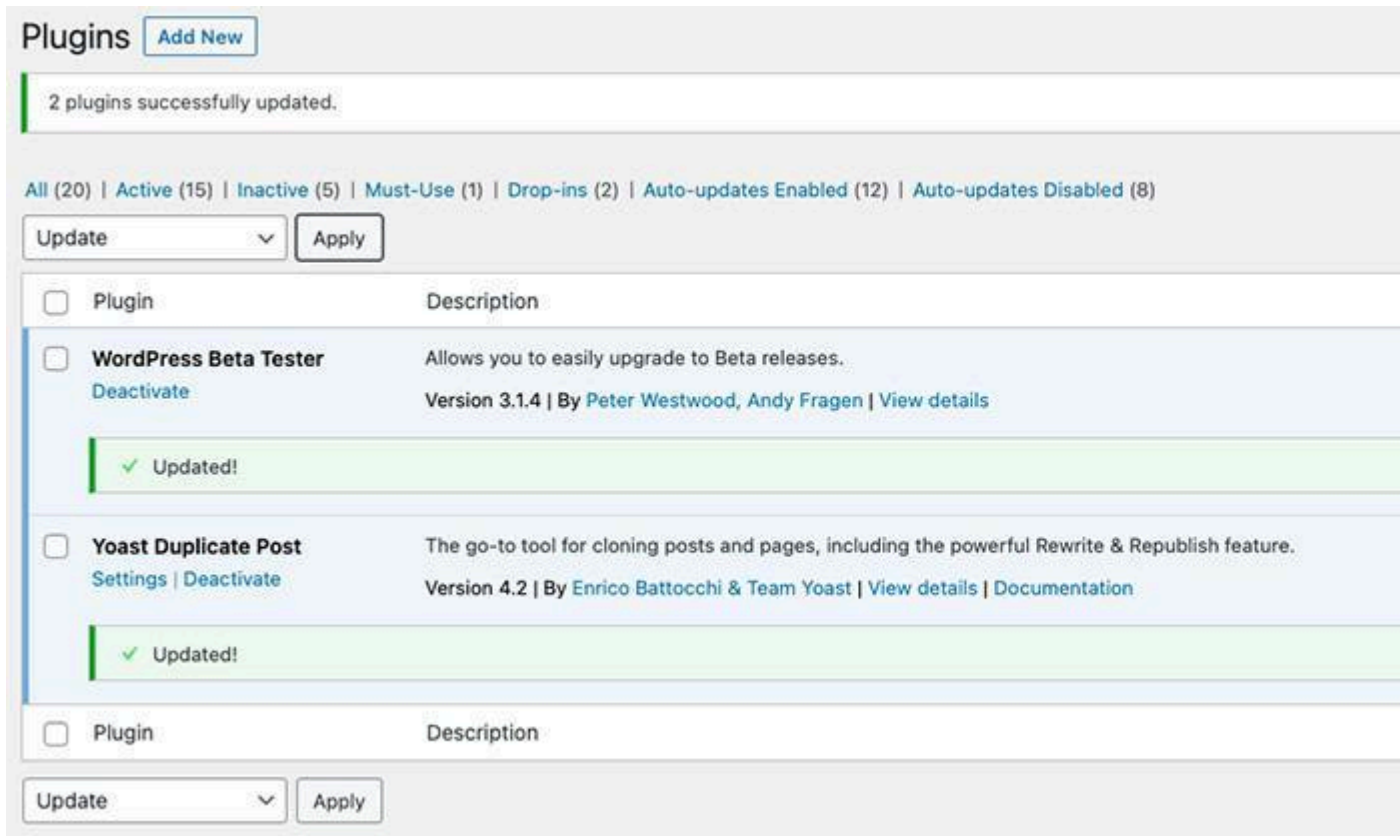

This screenshot shows the same 'Plugins' page, but now the checkboxes for 'WordPress Beta Tester' and 'Yoast Duplicate Post' are checked. The 'Bulk actions' dropdown menu is open, showing options like 'Update', 'Deactivate', and 'Delete'. The 'Apply' button is also visible. The update notifications for both plugins are still present.

Plugin	Description
<input checked="" type="checkbox"/> WordPress Beta Tester Deactivate	Allows you to easily upgrade to Beta releases. Version 3.1.1 By Peter Westwood , Andy Fragen View details
There is a new version of WordPress Beta Tester available. View version 3.1.4 details or update now .	
<input checked="" type="checkbox"/> Yoast Duplicate Post Settings Deactivate	The go-to tool for cloning posts and pages, including the powerful Rewrite & Republish feature. Version 4.1.2 By Enrico Battocchi & Team Yoast View details Documentation
There is a new version of Yoast Duplicate Post available. View version 4.2 details or update now .	

3. From the 'Bulk Actions' drop down, select 'Update' and click 'Apply'.

If all goes well with the updates, you will see a message saying that the updates were completed successfully.

Uninstalling Plugins

Plugins have a safe and easy-to-use uninstaller. If that is not available, you can also manually uninstall the plugins.

Automatic Uninstallation

The safe and easy way to uninstall a plugin is via the WordPress admin screen.

1. Navigate to your **Plugins** admin screen and locate the plugin to be uninstalled.
2. Select the checkbox next to the plugin name and click the "Deactivate" link.

Plugins [Add New](#)

 Each plugin has a checkbox on the left and action links (Activate, Deactivate, Delete) below its name. A red arrow points to the 'Delete' link for 'Contact Form 7'. At the bottom, there is another 'Bulk actions' dropdown and an 'Apply' button.

Troubleshooting

Occasionally, a WordPress Plugin may not work as expected. This section provides helpful resources and steps you can take for troubleshooting plugin issues.

Resources To Help Diagnose The Issue

- Review the plugin's documentation to confirm that you've followed the instructions. You can find this information in the Plugins page under the name of each Plugin > View details.

<input type="checkbox"/> Plugin	Description
<input type="checkbox"/> Advanced Custom Fields Deactivate	Customize WordPress with powerful, pro Version 5.11.1 By Delicious Brains View details
<input type="checkbox"/> Akismet Anti-Spam Settings Deactivate	Used by millions, Akismet is quite possib fully configured and being protected, ev Version 4.2.1 By Automattic View details

NOTE: If you have access to the plugin files, you can also find this information in the Plugin's folder inside readme.txt.

- Search the [WordPress Support Forums](#) for the name of the Plugin and keywords associated with the problem you are experiencing or the specific error message that is displayed.
- Search the [WordPress Plugins Directory](#) for the name of the Plugin. On the Plugins page, select the Support tab to read about issues reported in the Support Forums for that plugin.

- In some cases, the plugin may be buggy or incompatible. Deactivate the plugin. Search for other similar plugins, install and activate it and see if this resolves the issue.

If you don't know which plugin is causing the issue:

Sometimes problems may be caused by a conflict with different WordPress plugins. There are a few different ways you can tell which plugin is causing the issue.

- You installed a single plugin and experienced issues with your site soon after that.
- You updated a single plugin and experienced issues with your site soon after that.
- There's an error message telling you exactly which plugin file is causing the issue.
- Try deactivating plugins one at a time until you find the one that's causing the issue.
- Once you find the plugin that is causing the issue, you can either deactivate and activate it again to see if this helps. Or you can find other similar plugins from the [WordPress Plugins Directory](#), install and activate it and see if this resolves the issue.

Plugin Management

Plugins are managed from the Plugins admin screen of your WordPress site.

The screenshot shows the WordPress 'Plugins' admin screen. The left sidebar contains a menu with items like Dashboard, Posts, Works, Testimonials, Media, Links, Pages, Comments, Appearance, and Plugins (highlighted). Below the sidebar, the 'Installed Plugins' section is visible. The main content area shows a table of installed plugins with columns for Plugin, Description, and Automatic Updates. The table lists five plugins: Advanced Custom Fields, Akismet Anti-Spam, All-in-One WP Migration, All-in-One WP Migration Unlimited Extension, and femscores Custom Post Type and Taxonomy. Each plugin entry includes a checkbox, a 'Deactivate' link, and an 'Automatic Updates' link.

Plugin	Description	Automatic Updates
<input type="checkbox"/> Advanced Custom Fields Deactivate	Customize WordPress with powerful, professional and intuitive fields. Version 5.11.4 By Delicious Brains View details	Disable auto-updates
<input type="checkbox"/> Akismet Anti-Spam Settings Deactivate	Used by millions, Akismet is quite possibly the best way in the world to protect your blog from spam . Your site is fully configured and being protected, even while you sleep. Version 4.2.2 By Automattic View details	Enable auto-updates
<input type="checkbox"/> All-in-One WP Migration Deactivate	Migration tool for all your blog data. Import or Export your blog content with a single click. Version 7.54 By ServMask View details Contact Support Translate	Disable auto-updates
<input type="checkbox"/> All-in-One WP Migration Unlimited Extension Deactivate	Extension for All-in-One WP Migration that enables unlimited size exports and imports Version 2.43 By ServMask View details User Guide Contact Support Check for updates	Disable auto-updates
<input type="checkbox"/> femscores Custom Post Type and Taxonomy Deactivate	A simple plugin that adds custom post types and taxonomies Version 0.1 By Femy Praseeth	

Here you will find a list of all installed plugins, whether they are active or inactive. From this screen, you can activate, deactivate and delete plugins.

Plugins listed in bold are currently active.

Each plugin on the list also contains links to further information about the plugin.

Must-Use Plugins

Must-use plugins (a.k.a. mu-plugins) are plugins installed in a special directory inside the content folder and which are automatically enabled.

Must-use plugins do not show in the default list of plugins on the Plugins page and cannot be disabled except by removing the plugin file from the must-use directory, which is found in wp-content/mu-plugins by default.

For more details, please refer to [Must Use Plugins](#).

2.- Crea la teva primera galeria de fotografies tal com s'explica en aquest tutorial:

[How to create your first gallery](#)

3.- Afegeix la galeria a una pàgina o entrada.

A continuació tens un exemple:

Galeria

<input type="checkbox"/> Títol	Shortcode
<input type="checkbox"/> Australia Edita Edició ràpida Paperera Duplicate gallery	<div style="border: 1px solid #ccc; padding: 5px; display: flex; align-items: center;"> [modula id="5"] </div>

Entrada (edició)

Hola, món!

Us donem la benvinguda al WordPress. Aquest és la primera entrada.
 Editeu-la o suprimiu-la, i aleshores comenceu a escriure!

[/] Codi de substitució

[modula id="5"]

Editeu-la o suprimiu-la, i aleshores comenceu a escriure!

2.- Pràctica (2 hores)

Aquesta pràctica es realitzarà en grups de dues persones.

Cadascun dels grups haurà de buscar dos extensions diferents per a Wordpress, instal·lar-les al seu Wordpress i configurar-les per tal de que funcionin amb les diferents possibles configuracions.

Heu de preparar una presentació amb [Google Slides](#) explicant breument per a cadascun dels plugins:

- Per a què serveix el plugin, quines són les funcionalitats que ofereix i quan es pot utilitzar.
- Passos a seguir per a la seva instal·lació.
- Quines són les opcions de configuració i com es configura.

La presentació haurà de durar un màxim de 5 minuts per cadascun dels plugins, i es presentarà el proper dia de classe.

Per cada apartat heu d'incorporar captures de pantalla que donin suport a l'explicació.

Es valorarà:

- Claredat i adequació de la presentació oral (individual)
- Originalitat, utilitat i complexitat dels plugins.
- Continguts de la presentació.
- Està ben explicada la funcionalitat del plugin i les seves opcions?
- Està ben explicat com s'instal·la el plugin?

- Està ben explicat quines són les opcions de configuració del plugin i com es realitza la configuració?
