I believe education is the key to success and plays a big role and contribute to our society of betterment. The true goal of education is becoming a capable person to where learning is accomplishing a goal. For children, the goal of education is to enhance their knowledge, learning skills, and talents to sustain themselves to becoming a productive citizen of society.

My role of a teacher will be to deliver explicit and systematic instructions that will be helpful to my students for them to apply to the main subjects of learning. Including, offering positive feedback, being consistent, preparing effective lessons, interacting with the students, classroom management skills, and collaborating with other staff for the best interest of the students. When the students know you care and trying to help them with sincerity. You will have the best interest of the student, and class participation will increase. It is always important to make the students a priority when teaching, they learn best when they are in a secure, and supportive environment.

My goals for the students will be to encourage their growth, empower them as leaders, make them all cultures feel welcomed, build relationships, good study habits, and test takers. They will believe, have hope, and succeed. As an effective teacher, I will maintain sociocultural awareness, and accept them all as who they are, their differences when learning, and we will practice accepting of self and treating everyone the same.

However, every student can learn they will just have to learn how to apply it and stay focus. Remembering to always aim to meet their expectations and go after what you want. As I teacher I will be sure to redirect and accommodate any lessons to meet

their individual needs. I will always desire to help my students succeed and take on any challenges to help their growth to be even more successful. Always strive for better and excellence. My overall goal for teaching will be to make learning fun and interesting, and inspire students to find a love of learning, create an organized classroom, ensure that expectations are clear, and grading is fair, and to incorporate the best available teaching strategies.

In conclusion, I will ensure that my classroom will always be an inclusive learning environment and strive to incorporate instructional methods that support the diverse academic, social, and emotional needs of all students where everyone will benefit from it. I will always be opened to have new technology in my classroom where me and the students can learn together.
