GreenCandle : DashBoost

Summary

DashBoost aims to introduce the concept of a micro-proposal to the Dash community.

As part of this proposal we are requesting funds to build a web application to facilitate the micro proposal application process.

A micro proposal is a mechanism to enable low budget proposals 'micro-proposals' access funds outside of the traditional scope of the treasury.

The main components of a DashBoost micro proposal is that:

1. There will be lower proposal fees:
    a) 1 Dash fee to submit proposal (can be adjusted in accordance with community feedback)
    b) Fees collected will be used to fund the long term admin/maintenance of DashBoost

2. There will be an alternative voting mechanism which enables the broader community base to influence the allocation of funds:

    a) 1 Dash = 1 Vote
    b) Minimum of 1 Dash required to vote
    c) Only wallet verified user accounts can vote
    d) A cron will run daily to establish the amount of Dash in a users wallet and thus the number of votes they have

Value of DashBoost to the Community

- Lower barrier to entry for submitting proposals due to lower fees
- Increase in (micro) proposals which can unlock creativity and innovation
- Implementing a democratic structure that puts decision making power in the hands of the broader community base
- Adds well needed infrastructure to the Dash community
- Puts unused GreenCandle funds into the community for the community voting with lower thresholds and more community involvement

How are successful micro-proposals funded?

Micro proposals will be funded by surplus funds in the GreenCandle escrow services wallets.

Governance & Audit

GreenCandle and the GreenCandle escrow service will be responsible for administering funds to successful micro-proposal applicants

DashBoost will prepare monthly financial reports on all projects and publish on the Dash.org forums

DashBoost will be subject to Audit by GreenCandle

Technical Specification

See Google Doc Technical Specification for detailed Technical Specification.

Team

- @Pasta
- @TechSquad
- @Nutomic
- @Coingun / GreenCandle

Required Funding (3 Month Project)

- 90 Dash -Tech Dev - DashBoost Developmental Injection
- 45 Dash - Admin - DashBoost Operational Injection
- 15 Dash - Rainy Day - Saving for market downturns
- 5.01 Dash - Proposal Fee - Proposal Fee Reimbursement
- 3 Dash - Escrow Fee - GreenCandle

Total Requested Funds: 158.01 Dash

Milestones

- February 28th - Minimum Viable Product
- March 31st - Bug Fixing, Testing & Implement Community Feedback & Go Live
- April 30th - First live micro proposal cycle has been successfully completed

Treasury Funded Entity Vs. Self Funded Entity

Administration / Maintenance

DashBoost aims to become a self funded entity by collecting a 1 Dash fee on all micro-proposals. The commision will be used to fund the administrative and technical costs associated with maintaining the DashBoost service.
