To improve our localization Process we're trying out a new and exciting translation technology: Crowdin!

[Crowdin](#) is a full featured collaborative translation platform with the following key benefits:
- Global translation memory: Leverage existing translations from hundreds of other opensource projects to speed up translation.
- Live Translation (or "Just In Place Translation", a.k.a. "JIPT"): Translate your shop while you browse it, directly in Front-Office or in Back-Office.

And Crowdin [integrates with PrestaShop](#) in just a few clicks!

Translating PrestaShop with Crowdin in 3 easy steps (time required: 5 minutes)

1) Register on Crowdin
Visit [Crowdin's website](#) and create an account. It's free and easy.

2) Install the Crowdin Integration Module
[Download](#) the Crowdin integration module and install it like you would any other PrestaShop module. The module is called *translatools* because it actually does more than just integrating Crowdin :)

> Your shop should be in dev mode because **this module should never be used on a production shop**. PrestaShop declines any responsibility for problems resulting from the use of this module.

If all went well, you're all set.
Just after the installation of the module its configuration page should be displayed and look like this:

You can safely ignore the warning about the production shop stuff if you are not on a production shop :) If you see any other warning at the top of the page, ask for help!
You may see a "Translatability level" lower than 100%, but if it's close it's OK and you can proceed to step 3. If you see 0% there's a problem and you should ask translation@prestashop.com for help!
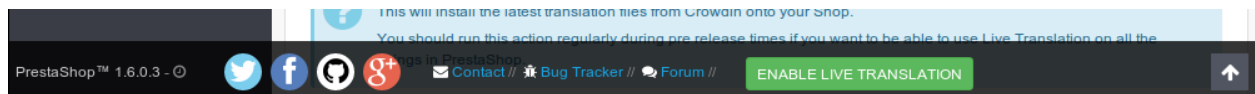

3) Translate!

In Front-Office

Visit your shop, switch the language to "Live Translation" and enjoy! All translatable texts become editable! When you want to leave Live Translation mode, just switch back the language to something other than "Live Translation".

In Back-Office

Visit your Back-Office, scroll down until the bottom bar appears:

Click "Enable Live Translation" and have fun!
This button turns into a "Disable Live Translation" button when Live Translation is active. Just click it to disable it when you're tired of translating.
