

How do I retrieve OPSWAT Client logs?

Check Your Product:

This article applies to all OPSWAT Central Management V7.5.0+ releases deployed on Windows or Linux systems, and all OPSWAT Client releases deployed on Windows, macOS, Linux, iOS and Android systems.

Please Note:

When troubleshooting an issue on a device, OPSWAT Support will usually request that the user send us the OPSWAT Client logs from their machine.

There are two ways to retrieve the Client logs:

- **OPTION 1:** Collect the logs directly from the Client device.

OPTION 2: Retrieve the logs remotely. This method:

- requires that the user have administrator privileges on the associated OPSWAT Central Management account
- requires that the device be connected to the OPSWAT Central Management server
- is only applicable to Windows/macOS persistent Client.

OPTION 1: Collect the logs directly from the Client device

Automatic Collection

Please Note:

This option is only available for Windows and macOS persistent OPSWAT Client.

Windows (Persistent Client)

1. Download OPSWAT's **Log Collector** tool, [Here](#).

2. Run the downloaded file.
3. The zipped log file, which may be very large, will automatically be placed on your desktop, to be forwarded to the OPSWAT team.

macOS (Persistent Client)

1. Download OPSWAT's **Log Collector** tool, [Here](#).
2. Run the downloaded file.
3. The zipped log file, which may be very large, will automatically be placed on your desktop, to be forwarded to the OPSWAT team.

Manual Collection

Windows (Persistent Client)

1. Go to the relevant location/s below to collect the required log/s:
 - Client logs:
 - Type **%ProgramData%** into the path bar and hit **Enter**.
 - Then add **\OPSWAT\Gears\logs** to complete the path.
 - Crash dumps:
 - Type **%ProgramData%** into the path bar and hit **Enter**.
 - Then add **\OPSWAT\Gears\logs\reports** to complete the path.
 - SDK logs:
 - Type **%ProgramData%** into the path bar and hit **Enter**.
 - Then add **\OPSWAT\Gears\sdk** to complete the path.
 - OPG (verification file) logs:
 - Type **%HOMEPATH%** into the path bar and hit **Enter**.
 - Then add **\Appdata\Local\OPSWAT\Gears\Logs** to complete the path.
2. Copy the required log/s, to be compressed (if necessary) and forwarded to the OPSWAT team.

Windows (On-Demand Client)

1. Go to the relevant location/s below to collect the required log/s:
 - Client logs:
 - Go to the folder where the OPSWAT Client executable file is stored.
 - Then locate the file named **gears-ondemand.log**

- Crash dumps:
 - Type **%HOMEPATH%** into the path bar and hit **Enter**.
 - Then add **\AppData\Local\CrashDump** to complete the path.

If on-demand Client is triggered by third-party vendors, go to the relevant location/s below to collect the required log/s:

- Pulse Secure Host Checker:
 - Type **%AppData%** into the path bar and hit **Enter**.
 - Then add **\Pulse Secure\Host Checker\policy_XXX** to complete the path. (so, for example: **C:\Users\bob\AppData\Roaming\Pulse Secure\Host Checker\policy_1**)
- VMWare Horizon Client:
 - Depending on which Horizon Client version you run, both the on-demand OPSWAT Client executable file and the log file can be found in one of the locations below:
 - **C:\Users<username>\AppData\Local\VMware Horizon View Client\Code Cache<uuid>**
 - **C:\Program Files (x86)\VMWare\VMware Horizon View Client\Code Cache<uuid>**

2. Copy the required log/s, to be compressed (if necessary) and forwarded to the OPSWAT team.

macOS (Persistent Client)

1. Open **Finder** and go to **/Library/Logs/Gears/logs**, as illustrated in the screenshot below.

- Copy the required log/s, to be compressed (if necessary) and forwarded to the OPSWAT team.

macOS (On-Demand Client)

- Go to the relevant location/s below to collect the required log/s:
 - Client logs:
 - For OPSWAT Client version 10.5.218.0 or earlier, go to **/Desktop/gears-ondemand.log**
 - For OPSWAT Client version 10.5.222.0 or later, go to **/Users/{username}/Library/Logs/Gears/logs**
 - Crash dumps:
 - Open Finder and go to **/Library/Logs/DiagnosticReports**

When running the macOS on-demand OPSWAT Client as Root, go to the location/s below to collect the required log/s:

- Client logs:
 - Go to **/var/root/Desktop/gears-ondemand.log**
- Additional malware logs:
 - Go to **/Library/Logs/Gears/logs/Metascan-Client-V2.log**

2. Copy the required log/s, to be compressed (if necessary) and forwarded to the OPSWAT team.

Linux V4 (Version 15.x.y.z)

1. Go to the location below to collect the required log:
 - Client logs:
 - Go to **/var/log/opswatclient**
2. Copy the required log, to be compressed (if necessary) and forwarded to the OPSWAT team.

Linux V3 (Version 14.0.x.y)

1. Go to the relevant location/s below to collect the required log/s:
 - Client logs:
 - Go to **/var/log/gears/log**
 - Error logs:
 - Go to **/var/log/gears.err**
 - Configuration logs:
 - Go to **/etc/gears/gears.json**
2. Copy the required log/s, to be compressed (if necessary) and forwarded to the OPSWAT team.

Android/iOS

On mobile devices, logs are only stored in the memory, but can be emailed directly from the OPSWAT Mobile App by selecting the **Submit Feedback** option.

OPTION 2: Retrieve the logs remotely via the OPSWAT Central Management Console

Please Note:

This method:

- requires administrator privileges on the associated OPSWAT Central Management account
- requires that the device be connected to the OPSWAT Central Management server
- is only applicable to Windows/macOS persistent Client

As an OPSWAT Central Management account administrator, follow the steps below:

1. Log into the OPSWAT Central Management Console and navigate to **Inventory>Devices**.
2. Use the **Search** field to locate the relevant Client device.
3. Click on the chosen device or, to fetch logs for multiple devices, check the boxes alongside to the relevant devices, then access the **Select Action** drop-down menu in the top right-hand corner of the screen.
4. Click on the **Fetch log** option, as illustrated in the screenshot below.

OPSWAT Central Management Console interface showing the **Devices** page. The page displays a table of devices with columns for Status, Name, Device Username, Agent Version, Issues, Groups, Last Reboot, and Local IP. Three devices are listed, all with status 'Online'. The first two devices have their selection checkboxes checked. The 'Actions' dropdown menu is open, showing options like 'Assign To Group', 'Compliance Check', 'Scan Threats', 'Exempt', 'Fetch log', 'Ignore', and 'Undo Ignore'. The 'Fetch log' option is highlighted with a red box. The page also includes a search bar, a table of actions, and a footer with version information and copyright notice.

STATUS	NAME	DEVICE USERNAME	AGENT VERSION	ISSUES	GROUPS	LAST REBOOT	LOCAL IP
☒	WIN-RJ62ZUBK...	Administrator	7.6.2210.111	0	Default	1 day ago	10.30.192.97
☒	WIN-RJ62ZUBK...	Administrator	7.6.2210.111	0	Default	1 day and 1 hour ago	10.30.192.98
☒	WIN-RJ62ZUBK...	Administrator	7.6.2210.111	0	Default	1 day and 1 hour ago	10.30.192.99

5. To view the log you fetched:
 - Go to **Inventory>Devices>Relevant Device>Events>Action Logs**, as illustrated below.

The screenshot shows the OPSWAT Central Management console. The left sidebar contains navigation links: Dashboard, Vulnerabilities, Groups, Inventory, and a list of devices including MetaDefender Kiosk, MetaDefender Core, MetaDefender Core Modules, MetaDefender Vault, MetaDefender ICAP Server, MetaDefender Email Gateway Security, MetaDefender Drive, MetaAccess NAC, MetaDefender for Secure Storage, MetaDefender Kiosk, and Linux. The main content area is titled 'Devices' and shows a summary of 0 issues, 0 CVEs, 0 threats detected, and 1 EXEMPTED device. Below this, the 'SYSTEM INFORMATION' section lists details for device WIN-RJ622UBKSS2, including Group Name (Default), Device Username (Administrator), Device ID, MAC / Local IP Address, Last Reboot, Enrolled At, Last Seen, Policy Name (Default), Hostname (WIN-RJ622UBKSS2), Public IP Address (10.30.192.99), Operating System (Microsoft Windows Server 2019 Standard Evaluation 64-bit), System Language (English (United States)), Custom Information (N/A), Agent Type (Persistent), Agent Version (7.6.2210.111), and SDK Version (4.3.3192.0). The 'EVENTS' section shows a table of action logs with columns for ACTIONS, STATUS, TIME, and MORE INFO. A 'Download Log' button is highlighted in the MORE INFO column for the 'Fetch Log' action. The 'DETAILED DEVICE INFORMATION' section is partially visible at the bottom.

Please Note:

When a Client device is connected to the OPSWAT Central Management Cloud, the device will collect the log files and submit them directly to the OPSWAT Central Management Cloud.

Support:

If you have any queries, concerns or issues around **Collecting Client Logs To Send To OPSWAT Support** or to **Send Log Files To OPSWAT Support**, please open a [Support Case](#) via phone, online chat or form.

If you have been asked to send Client logs to OPSWAT Support as part of the troubleshooting process, but they are too large to email or attach to the support ticket, please use the **Large File** submission feature on the OPSWAT Support Portal, [Here](#).
