Elevator Pitch

Controls more than one character on ONE screen with the SAME keys. Do you have the ability to make one of them survive and another die?

High Concept

Glows is a 2D side scroller game that's about Frey the tiny moth dragon who is trying to put every human who accidentally entered the forest she lives in to death. By leading any human who enters with the glow of her tail, the moth dragon is able to mind control them and make them follow her movement. With the traps, water, beasts, and all the dangerous elements in the deep forest, Frey needs to use all those methods to kill the man while avoiding harming herself in the process.

Characters Controls

Frey the Moth Dragon

Movement

Left / Right

Press W and D accordingly to move left or right direction. Character does not walk/run but hovers slightly above group. Camera does not follow the character, Character moves at a steady speed.

Jump (Fly)

Press W or space to jump. Jump during left or right movement will cause character to jump over a certain distance or obstacle. Player will slowly descend back to its hover height.

Confused Human

Movement

Left/Right

Humans follow Frey movement, but with a slight delay. They move at a slower speed than Frey.

Jump

Humans jump as Frey jumps with a slight delay. They descend quickly back to ground level.

Camera Spec

Camera stays still at one section until the player reaches the trigger
Player is immobilised while camera transitions

Features list + Juice plan

Various Trap Death Animation / Effect
Particle effect for environment
BGM
Special Effect on Frey Animation
Camera effect (shaken / flash)

Mechanics

Movement - Frey

Left/Right (Hover)

Jump

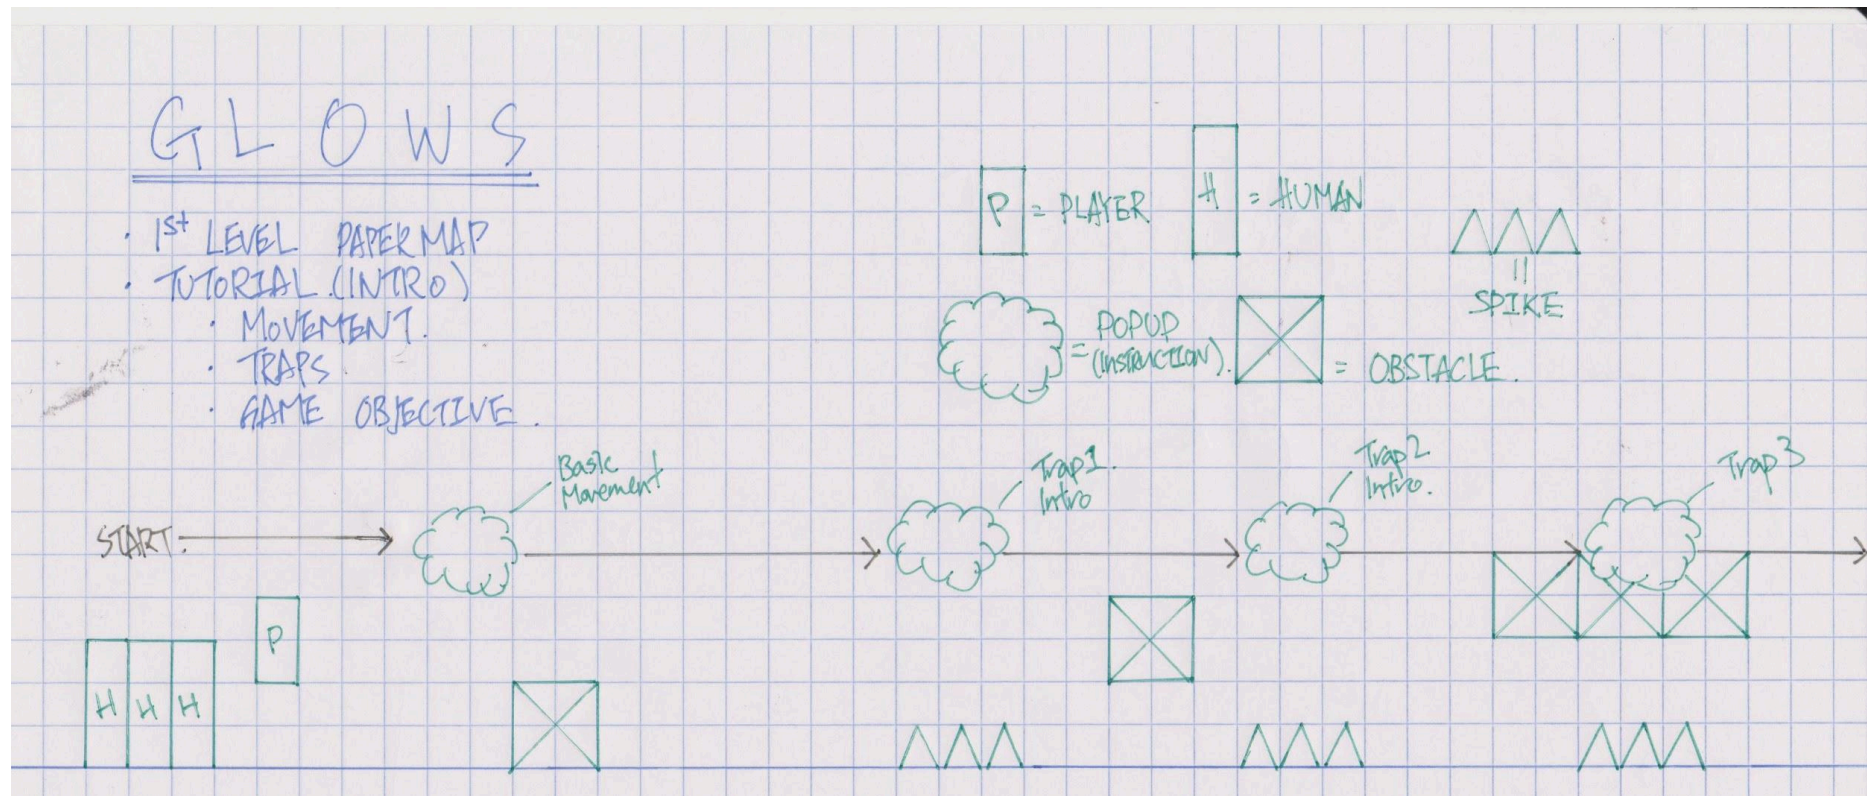

Death

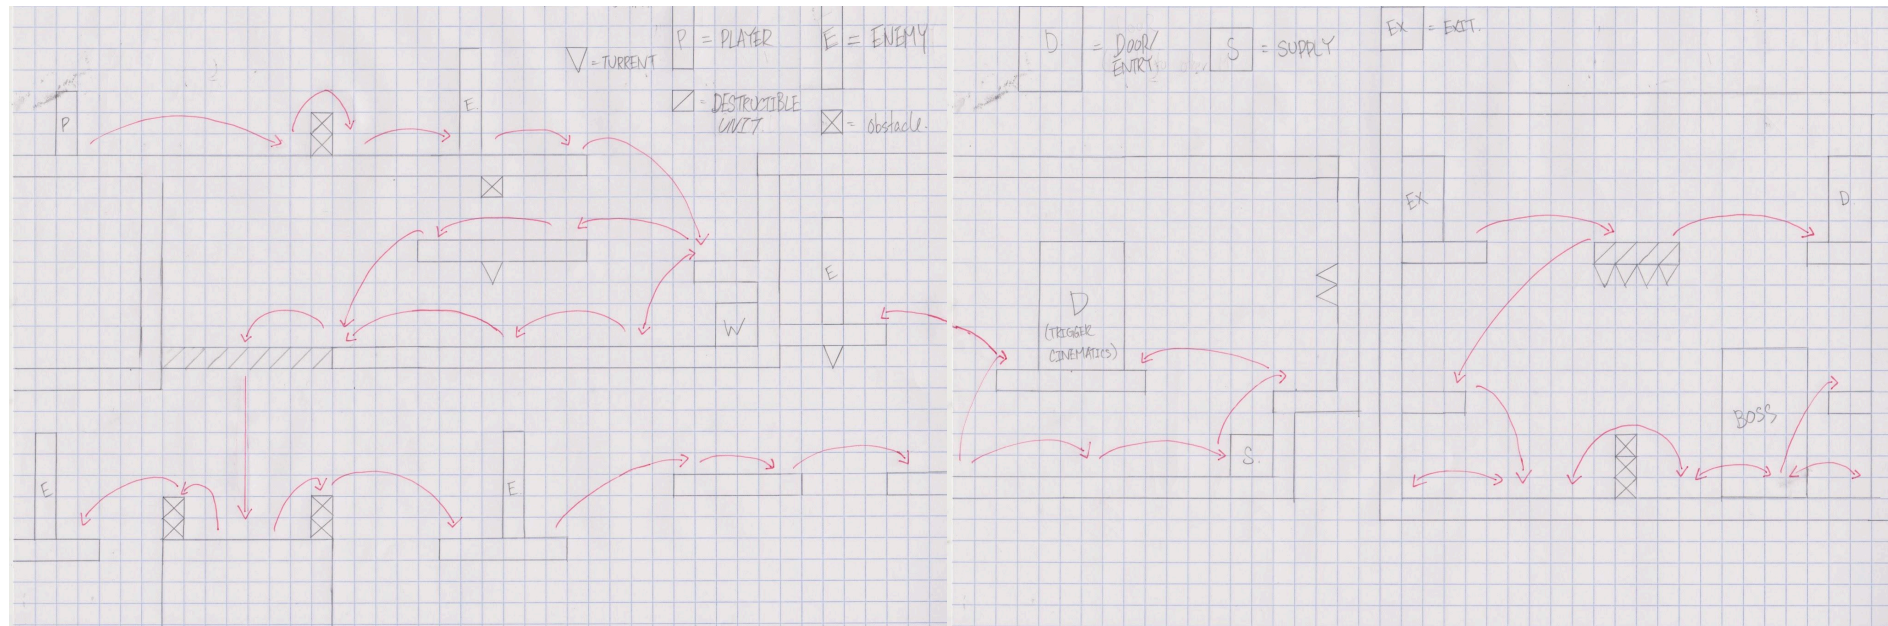

Character will die immediately if a damage source is triggered

Idle

Character will automatically land on ground, if there is no input from player in 5 seconds.
