Question 1 (Food and Festivals - E10.7.R1): Read the following description of two different food cultures: "In Mediterranean regions, people focus on fresh olive oil, seasonal vegetables, and lean proteins like fish to create light and healthy dishes. Conversely, in many East Asian countries, rice and noodles are the staples, often accompanied by fermented soy products and a wide variety of spices that add intense heat and depth to the flavor." Based on this text, classify these two cuisines by identifying their primary ingredients and their general health or flavor characteristics. **Answer:** The Mediterranean cuisine can be classified as a health-oriented diet that primarily uses olive oil, fish, and seasonal vegetables as its core components. On the other hand, the East Asian cuisine is defined by its use of starch-based staples like rice and noodles, combined with fermented products and pungent spices. While the Mediterranean style focuses on lightness and natural textures, the East Asian style emphasizes complex, spicy, and deep flavor profiles.

Question 2 (Digital Era - E10.8.R1): Scan the following text about the evolution of communication technology: "The journey of digital communication began in the late nineteen eighties with the invention of the World Wide Web by Tim Berners-Lee. By the early two thousands, dial-up connections were replaced by broadband, allowing users to stay online indefinitely without blocking phone lines. Today, the rise of five-G technology has made instant data transfer possible across the globe." Identify the specific time periods mentioned and the technological breakthroughs associated with each era. **Answer:** The text highlights three distinct periods: the late nineteen eighties, the early two thousands, and the modern day. In the late nineteen eighties, the breakthrough was the invention of the World Wide Web. During the early two thousands, the significant change was the transition from dial-up to broadband connectivity, and currently, the major evolution is the implementation of five-G technology for instant global data transfer.

Question 3 (Digital Era - E10.8.R2): Evaluate the impact of social media based on the provided statement: "Social media allows people to maintain long-distance relationships and share information instantly, but it often leads to a decline in face-to-face communication skills and increased feelings of loneliness among teenagers." Draw a conclusion about whether social media is more beneficial or harmful to social health, and justify your reasoning using the text. **Answer:** Based on the text, one can conclude that social media acts as a double-edged sword that offers functional benefits but poses psychological risks. While it is beneficial for maintaining connections across distances, the harm it causes to essential real-life social skills and emotional well-being is a significant drawback. Therefore, it is harmful if it replaces physical interaction entirely, as it paradoxically increases loneliness while keeping people digitally "connected."

Question 4 (Modern Heroes and Heroines - E10.9.R2): Read the following excerpt from a local doctor’s blog: "I spend sixteen hours a day at the hospital treating patients, but I often feel that medicine alone is not enough. I truly hope that our local government invests more in public parks and clean air initiatives so that my patients do not get sick in the first place." Interpret this text to identify the author’s primary wishes and explain why he feels this way. **Answer:** The author’s primary wish is for the local government to prioritize preventative public health measures, specifically by investing in green spaces and environmental cleanliness. He feels this way because his daily experience at the hospital shows him that clinical medicine cannot solve health problems caused by poor living conditions. He desires a proactive approach to health rather than just reacting to illnesses after they occur.

Question 5 (Modern Heroes and Heroines - E10.9.W1): Imagine that you are a modern-day hero or heroine who has the power to solve one global environmental crisis. Write a detailed paragraph describing your heroic identity, the specific actions you would take to save the planet, and the positive impact your actions would have on future generations. **Answer:** If I were a modern heroine known as "The Green Guardian," I would use my influence and advanced technology to implement a global reforestation project. I would lead thousands of volunteers to plant billions of native trees in areas destroyed by industrialization to restore the Earth's natural lungs. By doing this, I would stabilize the climate and ensure that future generations can breathe clean air and live in a world rich with biodiversity and natural beauty.
