SUNJACK USB BATTERY CHARGER

Do you find your phone battery often dies before the end of the day? Then you should buy a portable charger (for example SUNJACK USB BATTERY CHARGER) so you can keep it pumped up with battery while on the go.

We've put together a selection of great portable power banks that you can get right now and we've listed them down below.

Whether you're looking for a high capacity battery, slim design, lots of ports or something that can charge up both your phone and your laptop, we've got the great portable chargers you need to see.

Anker PowerCore

You've likely heard of Anker, and this is one of the company's best portable chargers. It comes with a huge 20,100mAh battery inside, meaning this will be able to charge up your phone or tablet multiple times before it needs a recharge.

It also comes with high-speed charging for your devices if they use PowerIQ or VoltageBoost. It won't be able to use Qualcomm's QuickCharge technology, but it'll still boost your device when you're on the go.

AUKEY Power Bank

If the Anker isn't right for you, our next choice is the Aukey 20,000mAh battery pack. It features two ports so you can charge both your phone and your tablet at the same time and also has a light to show you how much battery charge is leftover.

The blocky design may not be for everyone, but this portable charger should be able to charge your phone and other gadgets a few times over with such a high capacity cell inside.
Omnicharge Omni13

The Omnicharge Omni13 is possibly the most innovative device on this list, as, for a start, it has the ability to charge anything from laptops to DSLR cameras with its AC/DC outlet abilities.

It also supports flow-through charging, so you'll be able to plug in your phone or other device while charging the battery pack itself. The Omni13 is sizeable too, as it comes in either 13,600mAh or 20,400mAh sizes, but all that power fits into a surprisingly compact shell.

Iceworks 5000mAh Portable Charger

f you're looking for a slim charger you can slide into your bag's front pocket, this option from Iceworks is going to suit you nicely. There's no need to carry around a cable with this version, as the charging cables are built directly into the body.

Be warned, the Iceworks 5,000mAh charger will only work with micro USB (older Android devices) and Lightning (newer iPhone models) as there's no USB-C cable on here.

Poweradd Pilot 2GS

Poweradd also offers a great slim portable charger, and it's one of the cheapest options on this list yet boasts a substantial 10,000mAh cell inside.

It may be quite heavy, but this is only 1.3cm thick, making it a great device to slip into your back pocket when you're out and about. You'll want to grab a cable to go with it though as unlike the Iceworks choice above it doesn't come with one built in.
