

Ad Fontes Media monitors mistakes, errors, and changes in the news landscape. For prominent articles with corrections, we take into account the severity of the error, the wording of the correction, and the length of time before the correction. Full corrections are rated as is and half corrections get docked four points in their reliability score. Scores of the corrected article are then averaged with the original article score that took the error into account. The final score is not necessarily a strict average as discretion can be used.

Newsweek

Gustavo Petro Reacts to Trump's DEA Designating Him a 'Priority Target'

1. Original article:

<https://archive.is/csHo8>

Bias/Reliability Score: 0, 4

2. Current article: 0, 6.67

<https://www.newsweek.com/gustavo-petro-reacts-dea-priority-target-trump-11713326>

Bias/Reliability Score:

3. Final averaged overall article rating:

Bias/Reliability Score: 0, 5.33

Comment:

The original article contained a generative AI artifact that was factually incorrect. When informed of this, Newsweek removed the artifact, but left no update explaining to their readers that generative AI produced an error. Instead, they removed their disclosure that Martyn, their AI assistant, was used to help produce the story. This makes the current article misleading at best.
