

Cancer Diagnostic features proposal

COMMENTS and SUGGESTIONS

1. **George:** store all the extracted data, including occurrence number, in CONDITION_OCCURRENCE and related MEASUREMENT records and extract the occurrence information and “verified” modifier set into CONDITION_ERA and related MEASUREMENT record set post ETL algorithmically
2. **Andrew:** store additional (in addition to diagnostic feature core subset) measurements linked to a particular condition occurrence in the MEASUREMENT table
3. **Patrick, Tina:** use core diagnostic features and changes in those features (PSA) to identify recurrences
