Determining if a Resource is OER, Creative Commons Licensed, or Public Domain

1. Look for the Creative Commons button somewhere on the page,
2. Look for a link to the creativecommons.org website in the page's source code (in Firefox do CTRL-U to show the source code and CTRL-F to bring up the "find" dialog - you're looking for a link that includes the creativecommons.org domain and the phrase 'rel="license"'), or
3. Look around the website for the copyright or terms of use statement (hopefully this will include Creative Commons or the public domain), or
4. If worst comes to worst, find contact info for the author and email them to ask about how the content is licensed
5. Use the Public Domain Calculator to determine if a piece of work is in the Public Domain

Please be aware that if no copyright information is given on a resource, it is still copyrighted. You cannot cut/paste/copy material from websites and use it on our courses unless it is OER, Creative Commons licensed, Public Domain. If a resource is copyrighted, you can always link to it. Linking externally to materials does not violate copyright.

Attributing Resources

All current CC licenses require that you attribute the original author(s). If the copyright holder has not specified any particular way to attribute them, this does not mean that you do not have to give attribution. It simply means that you will have to give attribution to the best of your ability with the information you do have. Generally speaking,

License: Mountain Heights Academy: Creative Commons Attribution 4.0 International

this implies five things:

- If the work itself contains any copyright notices placed there by the copyright holder, you must leave those notices intact, or reproduce them in a way that is reasonable to the medium in which you are re-publishing the work.
- Cite the author's name, screen name, user identification, etc. If you are publishing on the Internet, it is nice to link that name to the person's profile page, if such a page exists.
- Cite the work's title or name, if such a thing exists. If you are publishing on the Internet, it is nice to link the name or title directly to the original work.
- Cite the specific CC license the work is under. If you are publishing on the Internet, it is nice if the license citation links to the license on the CC website.
- If you are making a derivative word or adaptation, in addition to the above, you need to identify that your work is a derivative work i.e., “This is a Finnish translation of the [original work] by [author].” or “Screenplay based on [original work] by [author].”

In the case where a copyright holder does choose to specify the manner of attribution, in addition to the requirement of leaving intact existing copyright notices, they are only able to require certain things. Namely:

- They may require that you attribute the work to a certain name, pseudonym or even an organization of some sort.
- They may require you to associate/provide a certain URL (web address) for the work.

If the resource is in the public domain, please include at attribution at the bottom of the page that specifies the URL the item was pulled from and “Public Domain”
