

Hi,

My name is Odin Williams, I'm 17, and I'm currently working toward my GED while preparing for a career as a first responder. I'm also pursuing storm chasing to gain hands-on experience responding safely to emergency situations. I'm training to become EMT certified and have knowledge of search and rescue procedures, so all equipment I use will be handled responsibly and for its intended purpose.

I'm developing a project called SARCAR (Search and Rescue & Chasing Vehicle). The goal of SARCAR is to build a fully equipped chase vehicle for storm chasing, emergency preparedness, and practical SAR experiences. This vehicle will allow me to gain real-world experience in first-responder operations while safely training for high-risk situations.

So far, I've taken several steps to bring SARCAR to life:

- Researching and planning the vehicle layout and equipment needed, including professional-grade lighting, communications systems, electronics, and SAR/emergency gear.
- Learning about storm-chasing safety protocols and emergency response best practices.
- Training in EMT skills and search-and-rescue procedures to ensure proper use of the vehicle and equipment.
- Networking with professionals and companies in the emergency response and storm-chasing communities to gain guidance and advice.

SARCAR is still in its early stages, but I'm committed to developing it responsibly and professionally. My hope is that by sharing this project, I can connect with people who are interested in storm chasing, emergency preparedness, or supporting young aspiring first responders.

Thank you for taking the time to read about SARCAR. I'd be happy to provide updates or discuss the project further if you're interested.

Sincerely,
Odin Williams
