

# Asteroids, Comets, and Meteors

Place an X in the appropriate boxes to indicate characteristics of asteroids, comets, and meteors

| Characteristic                             | Asteroid | Comet | Meteor |
|--------------------------------------------|----------|-------|--------|
| Appears as a <i>streak</i> in the sky      |          |       |        |
| Frozen ball of dust                        |          |       |        |
| Is visible in our sky                      |          |       |        |
| Made up of rock                            |          |       |        |
| Orbits the sun                             |          |       |        |
| Orbits between Jupiter and Mars            |          |       |        |
| Often called a shooting star               |          |       |        |
| Usually burns up in the Earth's atmosphere |          |       |        |
| Some are as big as a moon                  |          |       |        |
