Meta Title: Dysport El Paso | Wrinkle Reduction & Anti-aging Injections

Slug: /dysport-el-paso/

Keywords: Dysport El Paso variations

Meta Description: Most people start to notice facial wrinkles in their 30s. Learn how Dysport in El Paso, TX, injections can reduce the appearance of glabellar wrinkles.

H1 Dysport in El Paso, Texas

Fighting off wrinkles can seem like a losing battle as you age. The older you get, the more your skin thins out and loses collagen. These changes can make your skin look frailer and saggier over time. Fortunately, you can delay these changes with Dysport wrinkle-reducing injections. Like Botox, Dysport is a neurotoxin that relaxes the subcutaneous muscles of the face. As the muscles relax, the overlying skin becomes smoother in appearance. Dysport treatments are FDA-approved for glabellar lines (the “11”-shaped lines in the forehead). They are also commonly administered off-label to treat many other problem areas on the face.

Azul Medspa offers skilled El Paso Dysport injections for patients who want to reduce wrinkles or delay new wrinkle formation. Dysport is a highly effective anti-wrinkle treatment. One controversial study shows Dysport may be even better at reducing crow's feet than Botox.¹ If you'd like to try this treatment for yourself, schedule a treatment by calling 915-317-5212 (Azul Medspa East) or 915-584-2985 (Azul Medspa West).

H2 Dysport Benefits

There's only so much a regular skincare routine can do to hold wrinkles at bay. Sometimes, you need a little extra help to keep your smooth complexion, and that's okay! Dysport has a long history of safe use. It was first used in the 1990s to treat muscle spasms in the U.K. In 2009, the United States FDA approved the injectable as a wrinkle treatment. It uses the same type of toxin found in Botox (botulinum toxin). However, Dysport uses smaller amounts of the paralyzing agent. Here are some benefits Dysport injections in El Paso offer:

- More affordable than Botox
- Drastically reduces the appearance of “11” lines on the forehead
- Provides natural-looking results
- Smooths away wrinkles and fine lines

- It helps support a more youthful appearance
- Delivers results that last up to five months
- Temporarily freezes muscles to prevent new wrinkle formation

H2 Dysport Before and After*

Doing your research before undergoing any type of cosmetic treatment is wise. After all, you want to choose the right treatment for your needs and aesthetic goals. Review before and after images of patients who have received Dysport injections. Remember that different people respond uniquely to these types of treatments. Therefore, individual results may vary.*

H2 How to Prepare for El Paso Dysport Treatment

Dysport is a relatively straightforward procedure with a low risk of complications. But if you want to ensure you get the best possible results from your treatment, we recommend that you:

- Stay away from alcoholic beverages and cigarettes for at least a week before your treatment
- Avoid ibuprofen, aspirin, and other blood thinners for at least two days before your scheduled appointment
- Take Arnica or bromelain a few days before treatment if you're prone to bruising
- Come to your appointment with a clean, makeup-free face

If you have an important social event, we recommend scheduling your Dysport injections at least two weeks beforehand. It takes time for the treatment to deliver optimal results. Plus, you'll want to give yourself plenty of time to heal after your injections.

H2 What to Expect During Dysport Treatment

If you've ever received El Paso Botox injections, your Dysport appointment will feel similar. We'll clean the treatment area before making any injections. We'll also mark the desired treatment area to ensure your face looks smooth and symmetrical. We may ask you to smile or frown to see how your muscle contractions deepen the appearance of your wrinkles.

Then, we'll carefully inject Dysport into the desired areas. We may apply a topical numbing cream to the site if you're sensitive to discomfort. It's natural for the eyes to water a bit during the injections. Your entire appointment shouldn't take any longer than 15 minutes. The exact treatment time depends on how many areas we treat and how much Dysport we inject.

H2 Smooth Your Skin With Dysport Injections in El Paso

Would you like to turn back the hands of time a few years? You can with Dysport injections! In less than 15 minutes, we can inject a safe neurotoxin into the desired areas of your face. You'll be able to see an immediate improvement in the way you look. The final results of your treatment should be visible within a few weeks. To schedule a consultation, contact Azul Medspa at our East location (915-317-5212) or our West location (915-584-2985).

H2 Dysport FAQs

H3 How Much Does Dysport Cost in El Paso?

The average cost of a single Dysport treatment is between \$300 and \$400. Your appointment cost may vary based on how many Dysport units you receive and your provider's geographic location.

H3 What Are the Possible Side Effects?

Possible Dysport side effects include headache, minor pain and inflammation at the injection site, and skin irritation. These typically go away within a few days of injection. More serious side effects are rare and may include sinusitis, nausea, and respiratory infection.
