

Activity Guide - Classification Models

Fruit Or Veggie?

You should have been given a set of cards that has either a fruit or a veggie on it.

Step 1

Determine how “sweet” and how “easy to eat” each food is. If you’ve never eaten the food before or you’re not sure, you can use the recommended values on the card.

Step 2

Put a point on the graph for each food.

- If the food is a fruit, write a small F next to the dot.
- If the food is a veggie, write a small V next to the dot

When you are finished, you should have 10 fruit dots and 10 veggie dots on your graph.
