

Meeting notes: Engineering Monthly Meeting, July 29, 2021

Attendees

Sanja (RIP) ("The Boomerang")
Denys ("The Juggler")
Andrii (RIP) ("The Traveller")
Paul ("The Man With No Nickname")
Wayne ("Wayne")
Carlos ("The Professor")
Nurlan ("The Quiet One")

Notes

- Node exporter was forked and changed for Percona customers but is now possibly superseded by developments in upstream version. Carlos is working on a blog detailing how node_exporter works and the strategy for merging it back into the original repo.
- Universal metrics for all DBs and exporters: idea for standardised naming & IDs for metrics that would be a superset of all available metrics from all available sources, with mapping from raw/original to standardised. A data mapping exercise at first with later benefits for consistency in PMM and other consumers.
- We groomed and tagged some GitHub issues in the [mongodb_exporter](#) and [rds_exporter](#) repos. Some tags highlight issues that are good candidates for a tutorial for anyone wanting to work on exporter code.

The meeting ran for the full 60 minutes.
