

# Project Name

User Stories & Feature Requirements

# About This Document

This document documents the detailed steps that users take to accomplish specific tasks for this project. The sum of all steps is meant to create a narrative that describes the ways we expect users to use the product.

The steps are grouped by key features and provide the basis for the functional requirements of the project. The documentation will be largely written as user stories to set the expectations of our users, but will also include wireframes, feature requirements, assumptions, risks and constraints where aid the user stories, where needed.

-  User Stories
-  User Flows
-  Requirements
-  Assumptions
-  Constraints
