

The original guide broke and reloading it would break this link. I decided instead to provide a set of links to the documents so I can update this page as needed without links being lost on older posts or shares.

So, here are links to all the guides.

[SillyTavern Migration Guide](#): Step by step details to prep and set up SillyTavern on your computer.

[Setting up SillyTavern on Zeabur](#): Set up Silly Tavern on Zeabur, a cloud-hosted server.

Why Zeabur?

- 1) Cloud hosting means you can access SillyTavern from anywhere you have internet access without having to risk the security hole of a VPN to your home computer. (phone, tablet, another computer that doesn't block the API)
- 2) 24/7 access, even if the home computer is off, or just offline.
- 3) Ease of setup: Click a few buttons, then configure SillyTavern.
- 4) Backups you can schedule and forget about.
- 5) Quadrant hosts on the same server = your partner's memories are always available, and again, no tricky PC setup.
- 6) If you don't have a PC, or yours is dying, this is a solid workaround.
- 7) Total cost for server plus API access is about \$20-25/mo, depending on the server you pick.

NOTE: Folks outside the US may need to look into cloud server options in their country.

Setting up Qdrant on PC: COMING SOON

SillyTavern Extensions: COMING SOON TO THE MAIN GUIDE
