

# Around the Town

## Play

**Code your 123 Robot to drive to a friend's house.**

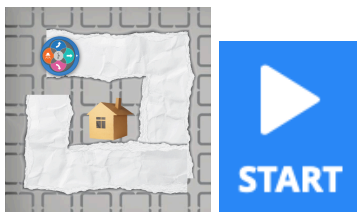

Use paper and tape to add a road and a house to the 123 Field, like the one in this picture.

Connect your 123 Robot to VEXcode 123.

Make a project to drive forward 3 steps, turn right 90 degrees, drive forward 3 steps, then turn right 90 degrees.

Put your 123 Robot on the top, left side of the road. Start your project to drive to a friend's house!

## Challenge

### Keep driving!

Add more [Drive for] and [Turn for] blocks to see if you can drive to the end of your road. Start your project to test it out!

### Right to left!

Change your [Turn for] blocks to "left" instead of right. Start your project again. How is your 123 Robot driving differently?
