ABSTRACT

Type the English abstract here. The abstract should briefly state the problem, the methodology, the principal results, and major conclusions. It should be self-contained and stand alone. Limit the abstract to 250 words. Ensure that it provides a clear overview of your research so that international readers can fully understand the scope and significance of your work.

Keywords: Keyword 1; Keyword 2; Keyword 3; Keyword 4.

1. INTRODUCTION

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be carefully reviewed and key publications cited.

Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions.

This section is not mandatory but can be added to the manuscript if the discussion is unusually long or complex. It should clearly explain the main conclusions of the work highlighting its importance and relevance.

ACKNOWLEDGMENTS

In this section, you can acknowledge any support given which is not covered by the author contribution or funding sections. This may include administrative and technical support, or donations in kind (e.g., materials used for experiments).

2. MATERIALS AND METHODS

Materials and Methods should be described with sufficient details to allow others to replicate and build on the published results. Please note that the publication of your manuscript implicates that you must make all materials, data, computer code, and protocols associated with the publication available to readers.

New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited.

3. RESULTS AND DISCUSSION

This section may be divided by subheadings. It should provide a concise and precise description of the experimental results, their interpretation, as well as the experimental conclusions that can be drawn.

Authors should discuss the results and how they can be interpreted from the perspective of previous studies and of the working hypotheses. The findings and their implications should be discussed in the broadest context possible.

4. CONCLUSIONS
