I received these questions from Dennis plus I've added other user questions below.

So I thought I'd share them here with everyone, and the answers 🙂

Hi Peter,
I have some questions to make sure this is the right service for my agency and our clients.

1. Can I use a unique gmail that is not named or associated with the business at all for each client project?

You need to use a Google Account, that has youtube connected and at least one video hosted on this Youtube Channel.

You can use one gmail account for all your projects, or create one unique one for each client, re your Question 9.

2. **Enter GMB Address: Use for GMB's with Hidden Address's Only - what do we enter here and when do we add and when do we leave it blank?**

There is the opportunity to promote Service Area only GBP's. This is covered in the training which you can find here.
http://www.gmbmastermind.biz/dominator-download/

3. Do the YouTube videos have to be hosted with the client? I know you said that YouTube channel is associated to the gmail and a channel set up/ at least 1 video.

See Answer 1.

4. Enter Article: What AI are you using and how do you create this article for spintax? Does your AI add the spintax ?

Re Article content, typically this article content is only for the Search Spiders, not many humans will be reading this content.

I personally use GPT 4 to create the article content based on "Niche", I will tell it

to write a 500 word SEO Optimised article based on "Niche" and add spintax so I can use this article over and over.

5. With Gsites Embedinator - where do you get the HTML that you added in to step 6. HTML Additional ?

We provided this area to post your own HTML, mainly for advanced users. You can leave this blank.

Or you can put embed HTML code for anything you would like embedded and gain extra links to the properties you embed.

Or you can put Iframes to your money site, which is what most users do.

6. How often do you suggest this is done for each client?

Some clients are over night rankings, others are much more competitive.

The beauty of the strategy included in these softwares are they are completely external to the GBP. This means there's no risk of over doing it.

Typically you'll run a project every other day till you get the rankings you want.

7. Can you do this same service using the same unique gmail used previously for the same client project multiple times using different keywords?

Yes, I only use one gmail for all projects, but as you ask in Question 9. If I had one client who I'm not sure will continue to pay I'd assign a google account for that client and if they do stop paying. You can simply delete that account, and they'll loose all the links generated. But typically you can use one account for all projects, the accounts are not niche related.

8. You mention 20 keywords, but when adding them to the software you say 10 keywords, and the video for GMB embedinator you say 8 keywords.

In GBP Dominator you can place 9 neighbourhoods in the software.
In GBP Embedinator Software you can place up to 20 Related Keyword Phrases.

9. What steps do I take to remove the work of the client no longer wishes to use continue my services ?

See above Answers.

10. Can I have several of my team members using this software concurrently?

If you purchase a LifeTime License, we can offer additional computer licenses for each software at a competitive price.
Contact Support if you'd like additional licences for each software.
Currently you can run GBP Dominator and GBP Embedinator on only the machine you install the softwares on etc.

11. How long does it take to run this project?
You mentioned the G sites Embedinator takes 40 minutes for the software to create the links. And you mentioned the GMB Dominator takes several minutes to create the links.

You can run both softwares at the same time.
(After initial project has been created and run in Dominator, Embedinator, uses system files created for each project by Dominator.)

Dominator about 20 mins
Embedinator about 30 mins
Both depending on how many Neighbourhoods you put in Dominator and Keywords in Embedinator. (Above numbers are for max of both, shorter time if you use less in each.)

I am just trying to gauge what my cost of labor will be for my team to use this software.

12. What would the competitive pricing for additional licenses ? I would need to start with the main purchase of $1998.50 + 1 additional license for my admin to start, and possibly a second license for my team lead.
Please advise so I can place my order soon.

Contact Support for additional licenses, after initial purchase.

Thanks.
Dennis

Indexing Question.

My question though is what ouput from the tools are you indexing? Meaning are you indexing the PDF? Every file on the drive that is created? I'm trying to wrap my head around what would be best to index everything that got created.

I use www.Indexmenow.com for indexing.
.
I put in the drive.google.com URL
The Sheets URL
The Slides URL
And all the Google Sites URLs

Prox Questions.
Hey, does the GMB Dominator requires any proxies or anything?

We've never had to use proxies with this product.

For Mac Users:

There's a couple of options.
1. Yes you can run a virtual machine.
2. You can run this software on a VPS. Contact support www.petesupport.com to get best recomendation for an inexpensive VPS that works with our software.
3. Buy a couple of year old Laptop with large screen. These work fantastic, you just need to keep the windows updates updated and run our software on that. You can get them really cheap, helps to keep your main workspace uncluttered etc and our software can sit there running 24/7 etc. (Preferred Option)

Pete Do you have an Affiliate Program?:

Yep register here to become an affiliate we'll have a JV page up shortly.
https://www.jvzoo.com/affiliate/affiliateinfonew/index/330652

Do the GPB's or GMB's Sitck?

Peter, are the bump in the map rankings temporary or short lived? How often do you recommend running a campaign per gmb?

They stick very well. Typically is a case by case basis, but once they are ranked a top up once per month works great. Generally speaking once they are ranked, they stick forever, unless your competitors start doing some work, then fire it up again to get back on top of them.

Which Computer to use?

Any special requirements to run these or just runs in background on my laptop?

Each software has a preview window, that should be on top, so if you're working on a laptop, then I'd do it at the end of the work day so it can do it's thing

I recommend people get a second PC / Laptop specifically for softwares like these, or you can run it also on a VPS.

Then they don't interrupt your workflow

More Customer Questions.

Just a few Questions

1. Will I be able to offer a service that says:

Look - you are not in the 3-pack - I will get you there for FREE
but when I get you there You them pay me $500/month to stay there.
Otherwise I take all the links and offer to one of your compatitors -

WILL THAT APPROACH WORK PETER?

That will certainly work with some GBP's but not others in the most competitive niches
but yes for the majority etc.

2. If a business does not move that much - can I run the software
again and build more citations & links until they do get position 1-3 in all areas locally
(ie -- can I keep improving their reach and location rankings by just running the software
multiple times?)

Yes, you continue to run it till you get the ranking you desire, then once per month or two as
top ups to keep their positions, but generally speaking they stick pretty good once you've got them ranked

3. Is there a group where I can ask questions daily as I get going
so that I don;t get stuck - and I am held accountable be some of my peers
to put the work in -- I can get distracted my friend.

No sorry no group.

4. my goal for the next 12 months - 20 MAPS clients @ $500 - 1000 Mth
Is this a reasonable goal Peter - and price to charge??

Ranking is easy compared to gaining new clients. If you can get clients
You'll crush it mate.

Which Additional Computer to use.

Question:

What ram, memory etc do I need for a laptop to run 20 to 30 accounts with your software(s)? How many GMBs can the software support at a time?

I'm PC not Mac. Just need to buy another PC to run your software

Answer:

2 Answers,

A) Buy an additional PC, the best ones to by are older PC's that have latest version of Windows with all updates.
You don't require much ram or CPU at all to run our softwares.
A 5 year old PC is more than capable of running our softwares, so you can get them cheap.

B) a VPS. The main requirement of a VPS is that it's running Windows Server 2019 or above.

This is what we recommend.
A VPS provider:

https://peterdrew.net/vps

Choose VPS from the top menu then under tailored plans heading click Windows VPS and choose from the options.

Question

Capacity to only run one GMB at a time or can it run several at a time? Example if I have let's say 10 GMBs I manage what is the process for ranking all 10 using your Apps? I manage all GMB accounts using one business email. Will this work? can I disable or delete links if a client cancels. Is it a global delete per email or per GMB account?

Answer:

Google Accounts.

The first thing to understand is that GMB Dominator uses Google accounts to operated, the google account must be connected to a working YouTube channel with at least 1 video hosted in it.

GBP Dominator is great, because it's 100% external to the GBP's you are promoting.

Meaning you do not have to access the GBP you are promoting at all.

So you can use a Google account not associated with any GPB's you are ranking.

Typically you can use just one google account in GBP Dominator to promote many different GPB's

That being said, if you have one client who you are not sure will continue paying. Create a separate Google account for this customer. So if they stop paying. You can delete all the work that's been put into that client.

PC's
You can run GBP Dominator and Embedinator Software on one PC at a time. Meaning you cannot open multiple copies of these softwares at the same time. We tried to make that happen, but since they do so much work across different platforms we could not make it reliable.

But you can purchase additional computer licences so you can run GBP Dominator and Embedinator on as many computers as you have licenses etc.

Additional Monthly computer licences Here
https://gmbmastermind.biz/additional-license/
