

Hypotheses

Colour might change
Might fade
Might be brighter
Drain all the colour out of the paper
Might absorb the water
Colour will run
Might make the water purple
It will run down the paper
it spreads everywhere

Observations

Water is being absorbed into the paper
Colours are splitting
Showing its real colours
Expanding
Base component colours are separating
Water climbs up
Separating it's colour

Questions

Why does it suck the water up?
Does it work with normal paper?
How come when water touches the colours it changes?
How do colours blend
Why is black a primary colour?
Try different paper
Try different water that is a different temperature
Try Seawater

Experimenting

Trying two colours
Three colours
Four colours
Five colours
Three colours, one twice
Blending colours
Same colours, different shades
Trying different colours or the same
Different colours in a line
Different colours underneath each other

RESULT

The colour separated all over the place

SUMMARY
