

Any of the following apply to you? This is why you should use EdReady to meet your educational and career goals...

I've already done this.

You may have gone through the topic before, but did you understand it? In math, many skills build off of previous skills. If you have a gap then it will be more difficult to move to more advanced concepts. This review will help to ensure future success in class.

If you have a good handle on the topics, great, this system will remove what you already understand from your customized learning pathway.

I was gone when the teacher went over this topic.

This tool allows you to pick up where you left off without the need to ask your teacher what you missed. It is tailored specifically to you and your needs. Fall behind, or want to move ahead? That's okay.

My score on the ACT or Accuplacer wasn't very high.

Use EdReady to prepare yourself for another attempt. Achieving higher scores on those exams will help you avoid Developmental Math classes when you get to college (which you pay for but don't earn credit for. They are just to get you ready to take college math). Preparing now will save you time, money and increase the likelihood that you will stay enrolled and graduate.

I don't like working on computers.

No one likes staring at a screen all day. Just spending a little bit of time each day on this system will help you achieve your goals faster than you would be able to otherwise. This system can figure out where you are at in your math skills and create a customized learning pathway for you (and allow you to skip content you already understand!) That would be impossible to do in a traditional setting or by paper and pencil alone. Using computers for efficiency in work and learning is now expected in any setting or career. There are people who can help you get through this. Talk to them about your frustrations and concerns.

I don't need this class. I'm getting a GED.

Perfect! This program will absolutely prepare you to for the GED assessments required to get your diploma.

I don't want to pay for classes in college that I won't get credit for.

Did you know that 80% of students drop out if they take a Developmental Math or English course in order to be placed into their college Math and English courses? Avoid that!
