

2018-02-13 Dataverse Community Call

Agenda

- DataCite Consortium
- Community Questions

Attendees

- Danny Brooke (IQSS)
- Gustavo Durand (IQSS)
- Julian Gautier (IQSS)
- Matthew Dunlap (HMS)
- Phil Durbin (IQSS)
- Tania Schlatter (IQSS)
- Courtney Mumma (TDL)
- Pete Meyer (HMS)
- Slava (DataverseEU/DANS)
- Paul Boon (DANS)
- Sherry Lake (UVA Libradata)

Notes

- DataCite Consortium
 - See <https://groups.google.com/d/msg/dataverse-community/9z5u9VWgVio/iTekCn07BAAJ>
 - (Gustavo) One single DataCite membership available to any Dataverse installation? Discuss.
- Dataverse 4.9
 - (Danny) We're working on persistent identifiers for files. See <https://github.com/IQSS/dataverse/issues/2438>
- Community Questions
 - (Slava) Question about 4.9 and provenance. If I deposit one file and it gets updated (new revision) and I want to keep relationship between files.
 - (Phil) Have you played with the "file replace" feature yet? <http://guides.dataverse.org/en/4.8.5/user/dataset-management.html#replace-files> . From a database perspective, the field "previousdatafileid" in the "datafile" table is where this information is stored.
 - (Gustavo) Three ways to add provenance information
 - user uploads PROV-JSON file (or enter free form text): <https://github.com/IQSS/dataverse/issues/4343>

- automatically generated on ingest:
<https://github.com/IQSS/dataverse/issues/4344>
 - file replace: <https://github.com/IQSS/dataverse/issues/4347>
- (Paul) Do persistent IDs for files work with Handles too?
 - Yes.
- (Sherry) EZID -> DataCite migration. Is it as easy as it sounds?
 - (Gustavo) We haven't done it yet ourselves, but it should be that simple.
 - (Pete) There might be some slight differences between EZID language and DataCite language. Is anyone using DataCite in production?
 - (Phil) <https://dataverse.no> is using DataCite in production and perhaps there are others.
 - (Pete) may be informative to check metadata from DV DataCite and DV EZID
- (Slava) Short update on DataverseEU. 5 languages with docker-compose. 5 instances of Glassfish with a shared Postgres and Solr.
 - (Slava) here's a link:
<https://github.com/Dans-labs/dataverse/blob/4.8.5-compose/conf/docker-eu/docker-compose.yml>
 - (Danny) Can you please post this to the dataverse-community list?
 - (Slava) Sure.
 - (Gustavo) Let's work together on getting it incorporated
 - (Pete) There are efforts to use OpenShift
 - (Phil) Yes, I'm mentoring a class about OpenShift and Kubernetes: <http://okrieg.github.io/EC500/PROJECTS/2018/all-projects.html#dataverse-scaling> . Perhaps you would be willing to speak with the students, Slava. Are you using Kubernetes?
 - (Slava) Sure and yes, for development we're using `docker compose` but we are deploying to Kubernetes on Google Cloud.
 - (Danny) How is the DataverseEU effort progressing?
 - (Slava) Every country will provide their own translation in a bundle.properties file.
