

Key Information

The items in this list are great suggestions for guides we are currently interested in. This document is regularly updated with new ideas for guides. Some guide ideas may have an extra reward bonus, displayed by a (value x/%) next to the topic.

*Note: You **must** still follow our Submission Process for these guides. Ensure you create a new issue on our GitHub repository and await a response before proceeding.*

FiveM - QBCore:

We are looking for new guides for the FiveM framework QBCore. We already have a QBCore section under our gameserver guides, but we would like to expand this with new guides. Ideas for guides include (but are not limited to):

- Setting permissions
- Managing QBCore jobs, items, vehicles etc. (shared files)
- Compilation of useful commands
- Using exports, with examples for common use

FiveM - Dunko vRP:

Guides regarding Dunko's vRP are also needed as we would love to expand this section on our guides. Examples could include:

- Installation of Dunko vRP
- Setting up group permissions
