I. SQL Commands

This is reference information for the SQL commands supported by Postgres.

Table of Contents

[ABORT](#) — Aborts the current transaction
[ALTER GROUP](#) — Add users to a group, remove users from a group
[ALTER TABLE](#) — Modifies table properties
[ALTER USER](#) — Modifies user account information
[BEGIN](#) — Begins a transaction in chained mode
[CHECKPOINT](#) — Force transaction log checkpoint
[CLOSE](#) — Close a cursor
[CLUSTER](#) — Gives storage clustering advice to the server
[COMMENT](#) — Add comment to an object
[COMMIT](#) — Commits the current transaction
[COPY](#) — Copies data between files and tables
[CREATE AGGREGATE](#) — Defines a new aggregate function
[CREATE CONSTRAINT TRIGGER](#) — Create a trigger to support a constraint
[CREATE DATABASE](#) — Creates a new database
[CREATE FUNCTION](#) — Defines a new function
[CREATE GROUP](#) — Creates a new group
[CREATE INDEX](#) — Constructs a secondary index
[CREATE LANGUAGE](#) — Defines a new language for functions
[CREATE OPERATOR](#) — Defines a new user operator
[CREATE RULE](#) — Defines a new rule
[CREATE SEQUENCE](#) — Creates a new sequence number generator
[CREATE TABLE](#) — Creates a new table
[CREATE TABLE AS](#) — Creates a new table from the results of a SELECT
[CREATE TRIGGER](#) — Creates a new trigger
[CREATE TYPE](#) — Defines a new base data type
[CREATE USER](#) — Creates a new database user
[CREATE VIEW](#) — Constructs a virtual table
[DECLARE](#) — Defines a cursor for table access
[DELETE](#) — Removes rows from a table
[DROP AGGREGATE](#) — Removes the definition of an aggregate function
[DROP DATABASE](#) — Removes an existing database
[DROP FUNCTION](#) — Removes a user-defined C function
[DROP GROUP](#) — Removes a group
[DROP INDEX](#) — Removes existing indexes from a database

[DROP LANGUAGE](#) — Removes a user-defined procedural language
[DROP OPERATOR](#) — Removes an operator from the database
[DROP RULE](#) — Removes existing rules from the database
[DROP SEQUENCE](#) — Removes existing sequences from a database
[DROP TABLE](#) — Removes existing tables from a database
[DROP TRIGGER](#) — Removes the definition of a trigger
[DROP TYPE](#) — Removes user-defined types from the system catalogs
[DROP USER](#) — Removes a user
[DROP VIEW](#) — Removes existing views from a database
[END](#) — Commits the current transaction
[EXPLAIN](#) — Shows statement execution plan
[FETCH](#) — Gets rows using a cursor
[GRANT](#) — Grants access privilege to a user, a group or all users
[INSERT](#) — Inserts new rows into a table
[LISTEN](#) — Listen for a response on a notify condition
[LOAD](#) — Dynamically loads an object file
[LOCK](#) — Explicitly lock a table inside a transaction
[MOVE](#) — Moves cursor position
[NOTIFY](#) — Signals all frontends and backends listening on a notify condition
[REINDEX](#) — Recover corrupted system indexes under stand-alone Postgres
[RESET](#) — Restores run-time parameters to default values
[REVOKE](#) — Revokes access privilege from a user, a group or all users.
[ROLLBACK](#) — Aborts the current transaction
[SELECT](#) — Retrieves rows from a table or view
[SELECT INTO](#) — Creates a new table from the results of a SELECT
[SET](#) — Set run-time parameters
[SET CONSTRAINTS](#) — Set the constraint mode of the current SQL-transaction
[SET TRANSACTION](#) — Set the characteristics of the current SQL-transaction
[SHOW](#) — Shows run-time parameters
[TRUNCATE](#) — Empty a table
[UNLISTEN](#) — Stop listening for notification
[UPDATE](#) — Replaces values of columns in a table
[VACUUM](#) — Clean and analyze a Postgres database
