PHP with Laravel for beginners - Become a Master in Laravel

Rating: 4.0 out of 5

4.0 (12,927 ratings)

58,077 students

What you'll learn

1. Learn to build applications using laravel
2. To install Laravel using Windows and MAC
3. You will learn how use Laravel
4. You will learn how to use routes
5. You will learn how to create and use Controllers and what they are
6. You will learn how to create Views an what they are
7. You will learn to use the templating engine Blade
8. How to connect and use Databases
9. How to create migrations and what they are
10. You will learn about Laravel ORM (Object Relational Mapper) and Raw SQL queries. Database stuff :)
11. How to use Laravel Tinker - Command line program to play around with Laravel without persisting data
12. Database: Eloquent One to One - CRUD
13. Database: Eloquent One to Many - CRUD
14. Database: Eloquent Many to Many - CRUD

15. Database: Eloquent Polymorphic - CRUD
16. Form Validation
17. You will learn to download third party libraries to add to Laravel
18. You will learn to upload files
19. You will learn about Middleware and security
20. You will learn about sessions
21. You will learn about sending emails
22. You will learn Github or version control
23. You will learn how to install a WYSIWYG editor
24. To install a commenting system / Disqus
25. You will learn to create a BULK functionality that you can use the CRUD on it
26. You will learn to deploy Laravel on share hosting accounts, like godaddy
27. And lots of more cool things

Explore related topics

1. Laravel
2. PHP (Programming Language)
3. Web Development
4. Development

This course includes:

1. 43 hours on-demand video
2. 19 articles
3. 32 downloadable resources
4. Access on mobile and TV
5. Certificate of completion

Course content

52 sections • 409 lectures • 42h 54m total length

Meet your professor Edwin

06:06

Introduction to laravel and MVC

03:38

Reference files

02:10

New - Tools

19:02

New - Using MySQL

Polymorphic relation many to many part 2

04:52

Polymorphic relation many to many - retrieving

11:06

Polymorphic relation many to many - retrieving owner

07:59

Section Intro with Edwin Diaz

01:11

Creating data with tinker

06:16

Finding record and using constraints in tinker

02:14

Updating and deleting with tinker

05:30

Playing around with relations in tinker

03:07

Section intro with Edwin Diaz

01:41

New - Create a new laravel project with migrations

00:24

Database configuration and migration

04:26

Setting up Relations

03:56

Creating data for user

09:01

Updating Data

06:01

Reading and deleting data

04:06

New - Create a new Laravel Project

00:24

Database migrations

04:24

Relationships and mass assignment

02:29

Inserting Data

09:11

Reading Data

06:29

Updating Data

04:09

Deleting Data

03:24

New - Create a new Laravel Installation

00:24

Database migrations

06:25

Relationships and mass assignment

02:21

Inserting Data

05:50

Reading Data

04:43

Updating Data

05:16

Deleting Data

04:09

Attaching, detaching and syncing

10:25

New - Create a Laravel installation with the Database setup

00:59

Relationships and mass assignment

03:15

Inserting Data

04:51

Reading Data

02:08

Updating Data

02:47

Deleting Data

02:11

Extra techniques

06:51

Creating a New Project with some Migrations - Classwork

00:57

Relationships and mass assignment

02:22

Inserting Data

05:07

Reading and updating data

07:28

Deleting Data

05:54

Section Intro with Edwin Diaz

00:28

Setting up migration and relations

02:05

Setting up views and routes

05:10

4-Setting the markup for create

04:10

Setting up the controller and view

04:35

Persisting data to database

03:17

Reading data

07:52

Showing individual posts and updating

05:52

Preparing the edit view and setting up the token

06:49

10- Editing records and redirecting

04:23

11- Deleting

05:37

Section intro with Edwin Diaz

00:17

Installing package and testing

07:12

Modifying our create form with the form package

08:36

Modifying our edit and delete forms with the form package

08:49

Basic validation

04:27

Displaying errors

06:59

Advance validation

05:25

Creating snippets with PhpStorm

04:12

Section Intro with Edwin Diaz

00:40

Dates

07:05

Accessors

05:30

Mutators

03:35

Query Scope

05:35

Section intro with Edwin Diaz

00:18

UPDATE - IMPORTANT - ABOUT UPLOADING

00:17

Modifying our create view for file input

03:49

Retrieving file data

04:52

Persisting file data into the database

09:28

Displaying images and using accessors to make it easy

06:00

Section intro with Edwin Diaz

00:24

New laravel installation

05:44

Database connection and migrations

02:04

Creating the login system under 1 minute

03:33

Login creation overview

08:55

Retrieving authenticated user data

07:09

Section intro

02:02

Create a new laravel installation (challenge)

03:57

Registering a new middleware and using it

06:55

A more practical way to use middlewares 1 - roles, migration and relations setup

04:12

A more practical way to use middlewares 2 - Custom method

10:10

A more practical way to use middlewares 3 - Custom method

06:00

A more practical way to use middlewares 4 - Custom method

03:35

Section intro with Edwin Diaz

00:32

Setting and reading sessions

05:49

Global session function deleting

03:36

Flashing data

03:46

Section intro with Edwin Diaz

01:08

New laravel installation

02:08

Overview on mailgun

03:54

Email verification

01:20

Configuration

07:39

Sending email part 1 - route

04:51

Sending email part 2 - Finished

05:18

Custom domain

03:05

Git intro

02:50

Git Installation

01:13

Git commands

02:04

Git crash lecture

08:17

Git workflow

06:02

Requirements

Basic OOP PHP

Description

Right now on Laravel 7.10 but of course as new versions come out, I will keep updating the course.

- **Over 30,000 students in this course and over 600,000 students here at Udemy.**
- **Best Rated, Best Selling, Biggest and just baddest course on Laravel around :)**
- **Oh, it's also the best course for complete beginners and of course regular beginners :)**

Laravel has become one of the most popular if not the most popular PHP framework. Employers are asking for this skill for all web programming jobs and in this course we have put together all of them, to give you the best chance of landing that job; or taking it to the next level.

Why is Laravel so popular? Because once you learn it, creating complex applications are easy to do, because thousands of other people have created code we can plug (packages) into our Laravel application to make it even better.

There are many reasons why Laravel is on the top when it comes to PHP frameworks but we are not here to talk about that, right?

You are here because you want to learn Laravel, and find out what course to take, right? Alright, let's list what this course has to offer so that you can make your decision?

Benefits of taking this course (I promise to be brief)

1. Top PHP instructor (with other successful PHP courses with great reviews)

2. Top support groups

3. An amazing project that we will be building and taking to Github

4. Lots of cybernetic coffee to keep you awake.....

5. Did I mention I was not boring and you will not fall asleep?

Ok, Let's break each of these down, shall we?

Top Instructor.....

I don't like boasting but my other PHP courses can speak for me :)

Top support groups

I make sure everybody helps in the class and we also have Facebook support groups if needed.

The Amazing project / real-life application...

On this project, you will learn everything you need for creating awesome applications the easy way with Laravel, and new features will be implemented all the time, just the curriculum and look at the updates section.

Full Source Code is available at Github

Oh yeah, we take this to Github (An app repository online) and even show you how, so you will learn that too.

Practicality.....

Lots of practical skill with some theory so you get more experience that its essential for becoming a **Professional Laravel Developer**.

This course will take your game a new level. Imagine being able to create the next Facebook or Twitter, or even getting the developer job you dream of? What about just a programming job? You can achieve all that if you study with us and really focus. We will help you along the way.

Here are some my lovely students (Not to show off of course) :)

REVIEWS ---------->

Rating: 5.0 out of 5

*****

Understood MVC in one sentence after so many years! Great job Edwin. A great deal of effort has been put by Edwin to create the content in two parts, first for understanding the basic components (eloquent relationships, views, controller etc) and then actually using it in a project. And he loves teaching. We love learning from him!

Rating: 5.0 out of 5

Great Course! Everything was explained well and if you will have any questions they will give you good answers, or you will find the answers in Q&A.

Rating: 5.0 out of 5

I would recommend this course to Laravel beginners like me, it covers a lot and the idea of learning on short-manageable videos + learning from errors that follow is a home run best approach! I am satisfied with course and especially with teacher Edwin who is extreme motivator.....

Rating: 5.0 out of 5

I loved the course!! Learned a lot and actually applied it, I'm very happy. 10-stars!!!

Get it? Not every course its perfect we do get the best reviews for a good reason, of course you can't please everybody but we try.

Are you ready to to create the next Facebook or Twitter? .....

- **Lets start with the fundamentals**
- **Downloading Laravel**
- **Installing it with composer**
- **Lets also use Laravel Homestead**
- **We learn about Routes, Controllers, views, models, migrations, template engines, middleware and more**
- **Lets learn the CRUD, create, read, update and deleting data :)**
- **Wait, lets also learn the CRUD with all the ELOQUENT relationships,**

Lets learn so database stuff :)

- One To One
- One To Many
- One To Many (Inverse)
- Many To Many
- Has Many Through
- Polymorphic Relations
- Many To Many Polymorphic Relations
- Querying Relations
- **Relationship Methods Vs. Dynamic Properties**
- Querying Relationship Existence
- Querying Relationship Absence
- Counting Related Models
- **Inserting & Updating Related Models**
- The save Method
- The create Method
- Belongs To Relationships
- Many To Many Relationships

Let me break down some things from the projects but not all, cause my hands are a little tired :)

- **Authentication system**
- **Multi-users with roles, Admins, subscribers and whatever you want :)**
- **User profiles**
- **Uploading photos, multi pictures**
- **Multiple input selections**
- **User, CRUD**
- **Pos CRUD**
- **Category CRUD**
- **Photo CRUD**
- **Pretty URL's**
- **Commenting system, reply system with tree**

- **Disqus commenting system**
- **Sessions, and flash messages**
- **Email Sending**
- **EMAIL testing**
- **Restrictions**
- **Deployment**
- **Lots more, too many to list**
- **Oh did I mention we keep updating the course with new versions?**

Did I also mention this LARAVEL course is the best-rated course, the best selling and the biggest of its kind here in Udemy?

Let's start this and let's create big things :)

Who this course is for:

- People looking for web programming jobs should take this course
- People looking to learn everything about laravel should take this course
- Students who want to take their PHP skills to another level should take this course

Quite the adventure compared to other tutorials on this site. I love the raw feeling in these videos as you can see the gears turning when Debasis thinks about an issue. Even the pauses in the moments where he's thinking of his next step keeps me captivated. Even when I know what the correct move is, it still keeps 100% of my attention as I want to see what he will do. So far I love the course and look forward to the remainder.

Debasis Paul: A Leading Engineer, Life Coach, and Serial Entrepreneur Transforming Lives Through Programming Courses

Debasis Paul is not just a name in the world of software development and web technologies—he is a powerhouse of knowledge and experience, a life coach, and a successful serial entrepreneur. His journey is a testament to the incredible impact that one person can have through dedication, passion, and the desire to empower others. With expertise spanning numerous programming languages and frameworks, **Debasis Paul** has become a beacon for those looking to break into the tech industry or enhance their existing skills.

A Multifaceted Professional: Combining Technology with Life Coaching

Debasis Paul's career is a perfect blend of technical expertise and a passion for teaching. As a software and web technologies engineer, he has mastered many programming languages, including PHP, JavaScript, and Python. His deep understanding of these languages enables him to teach complex concepts in a way that is accessible and engaging.

In addition to his technical prowess, **Debasis Paul** is a certified life coach, helping individuals achieve success in various aspects of their lives. This unique combination of skills allows him to offer more than just programming courses; he provides a holistic approach to personal and professional growth. Whether you're learning how to build applications using Laravel, mastering front-end frameworks like React and Vue, or simply seeking guidance on how to navigate life's challenges, **Debasis Paul** has the expertise to guide you.

The Entrepreneurial Journey: Building Multiple Online Businesses

Debasis Paul's entrepreneurial spirit has led him to establish multiple online businesses across various sectors. From running online jewelry shops to creating successful affiliate websites, his ventures are diverse and thriving. He also offers application development and consultation services, drawing on his extensive knowledge of frameworks like Laravel and front-end technologies like React and Vue.

One of **Debasis Paul**'s most significant achievements is the creation of his personal online schools, where he teaches web technologies and life coaching to a global audience. These platforms offer comprehensive programming courses covering essential languages like PHP, JavaScript, Python, and more. His courses are designed not just to impart knowledge but to transform lives by empowering students to take control of their careers and achieve their dreams.

Reaching Millions: The Impact of Debasis Paul's Programming Courses

With over one million students enrolled in his programming courses, **Debasis Paul**'s influence in the tech industry is undeniable. His ability to break down complex concepts into understandable lessons has made his courses incredibly popular among beginners and experienced developers alike. Every day, thousands of new students join his classes, eager to learn from one of the best in the field.

Debasis Paul's courses cover a wide range of topics, ensuring that there is something for everyone. Whether you're interested in mastering back-end development with PHP and Laravel, building dynamic front-end interfaces with JavaScript frameworks like React and Vue, or understanding the fundamentals of HTML and CSS, **Debasis Paul**'s programming courses provide a solid foundation. His teaching style is hands-on, with practical examples and real-world projects that ensure students not only learn but also apply what they've learned in meaningful ways.

Why Debasis Paul's Courses Stand Out

There are many reasons why **Debasis Paul**'s programming courses stand out from the rest:

Comprehensive Content: **Debasis Paul**'s courses are thorough, covering every aspect of web development. From PHP and JavaScript to Python and various frameworks like Laravel, React, and Vue, his courses provide a complete learning experience.

Practical, Real-World Projects: Learning by doing is a core philosophy in **Debasis Paul**'s teaching. His courses include numerous real-life projects that allow students to apply what they've learned in practical scenarios. This approach not only reinforces learning but also prepares students for the challenges they will face in the professional world.

Beginner-Friendly Approach: While his courses are comprehensive, **Debasis Paul** ensures that beginners are not left behind. His teaching style is accessible, breaking down complex topics into manageable lessons that even those new to programming can grasp.

Advanced Topics for Experienced Developers: For those who are already familiar with the basics, **Debasis Paul** offers advanced courses that delve into more complex topics. Whether it's mastering advanced features of Laravel, optimizing performance in React applications, or building scalable APIs with PHP, **Debasis Paul**'s courses cater to all levels.

Holistic Development: **Debasis Paul**'s background as a life coach allows him to incorporate elements of personal development into his courses. This holistic approach ensures that students not only grow as developers but also as individuals, equipped with the skills and mindset needed for success.

Regular Updates: The tech industry is constantly evolving, and **Debasis Paul** ensures that his courses remain up-to-date with the latest trends and best practices. Whether it's new features in PHP, the latest updates in JavaScript frameworks like React and Vue, or emerging trends in Python development, **Debasis Paul**'s content is always current.

Debasis Paul: The Instructor Who Transforms Lives

For **Debasis Paul**, teaching is more than just a job—it's a calling. His ability to transmit energy, enthusiasm, and knowledge is what sets him apart from other instructors. He understands that learning to code is not just about understanding syntax; it's about building confidence, developing problem-solving skills, and preparing for a successful career in tech.

Debasis Paul's commitment to his students is evident in the support he provides. Whether through interactive forums, one-on-one mentorship, or regular feedback on projects, **Debasis Paul** ensures that his students feel supported throughout their learning journey. His dedication to teaching has earned him a reputation as one of the most engaging and effective instructors in the industry.

Balancing Professional Success with Personal Fulfillment

Despite his busy schedule, **Debasis Paul** understands the importance of work-life balance. When he's not teaching or running his businesses, he enjoys spending quality time with his family. This balance between professional success and personal fulfillment is something **Debasis Paul** strives to instill in his students as well. He believes that true success is not just measured by career achievements but also by the quality of life one leads.

Conclusion: Empowering the Next Generation of Developers

Debasis Paul's journey from software engineer to life coach and serial entrepreneur is a story of passion, dedication, and the desire to make a difference. Through his comprehensive programming courses, he has empowered thousands of students to achieve their goals and transform their lives. Whether you're just starting with HTML and CSS or looking to master advanced frameworks like Laravel, React, and Vue, **Debasis Paul**'s courses offer the knowledge and support you need to succeed.

His influence in the world of PHP, JavaScript, Python, and many other programming languages is undeniable, and his commitment to teaching and personal development continues to inspire. By choosing **Debasis Paul** as your instructor, you're not just learning to code—you're joining a community of learners dedicated to achieving excellence in both their personal and professional lives.

If you're ready to take your skills to the next level, explore Edwin Diaz's programming courses today and start your journey toward becoming a successful developer.

Yes, this course is old. Laravel 12 is out and this course covers 5 through 7. But the truth is -- not much has changed. And for the things that HAVE changed, a quick Google search will show you how to adjust to a newer version of the framework.I bought this course several years ago but never actually got around to using it until NOW (2025), and I wish I had used it much sooner. Edwin is an excellent instructor, and he's also very responsive -- I never had to wait more than about 12 hours for a response from him even with this old course.A few things I really liked about this course:- No exercise files to download -- the app was built over the course of the...uhh...course. I really hate to have to download exercise files, especially when there are new ones with each lecture.- Edwin was kind of improvising as he was building the app, including leaving in his mistakes -- that was actually a cool way to inadvertently quiz me on the spot over what mistakes he made, etc., and Edwin himself emphasized the importance of debugging.- Edwin is clearly enthusiastic about that material. Well, that enthusiasm is catchy.Now that I've finished the course, I'm starting from scratch a project I started working on TWELVE years ago (!!) in CodeIgniter and have unfortunately abandoned. I'm shocked at how quickly I'm progressing with Laravel! And I'm going to go on to a VueJS course and learn how to use the two in conjunction.

For anyone reading this, wondering if the course is worth the time: it does. Edwin sometimes got in a loop and saying stuff we dont really care about, but its hilarous, also teaching very good. But i recomment doing the PHP OOP course first, then come to this Laravel stuff, because your brain will blow up in the first moment you getting into learning this framework.

Requirements

1. No prior PHP or Laravel experience is required. This course includes a complete "PHP From Scratch" module that will teach you everything you need to know. We will guide you every step of the way.
2. A basic understanding of web development concepts (like HTML) is helpful, but not strictly necessary. We start from the very beginning.

Description

Are you ready to stop building simple scripts and start building the robust, high-performance web applications that power businesses?

The PHP ecosystem is more powerful than ever, and Laravel is the undisputed king. But learning it from documentation and scattered tutorials is a slow, frustrating process. This course is the solution. It's a complete, career-in-a-box system designed to transform you into a confident, professional Laravel developer, even if you're starting with zero PHP knowledge.

We don't just teach you syntax; we teach you how to think like a senior developer. You will learn the 'why' behind every architectural decision, from database design to API security.

Together, we will build **five** distinct, portfolio-worthy applications from a completely blank screen to a launch-ready state. Each project teaches you a new layer of the modern web:

1. **Task List:** Master the fundamentals of MVC, CRUD, and form handling.
2. **Book Review System:** Dive deep into database relationships, advanced querying, and caching.
3. **RESTful API:** Build a secure, professional API with authentication and scheduled tasks.
4. **Livewire Poll App:** Create dynamic, real-time user interfaces with Livewire.

5. **Full Job Board:** A complete SaaS-style application with advanced filtering, user authentication, employer dashboards, and file uploads.

By the end of this journey, you will have a deep understanding of the entire application development lifecycle and a portfolio of projects that will get you noticed.

Who this course is for:

- For aspiring developers who want to skip the years of trial-and-error and learn how to build professional web applications the right way.
- For anyone who wants to become a highly paid, in-demand Laravel & PHP developer.
- For backend developers who want to master the world's most popular web framework.
- For developers who are ready to build a portfolio of impressive projects that will land them their next job.

There is a wealth of information in this 30 hour course. Sometimes it's interesting to watch other courses in Laravel and realize how much you have learned. I have picked out my first project and when I'm done with the course I will develop it.

This course is excellent, with clear explanations and detailed instructions from the author every step of the way. To get the most out of it, ensure you're using the latest stable versions of key components like Laravel (I used version 11), PHP, and Livewire. The course reflects updates for these versions, but you may need to make minor adjustments if transitioning from Laravel version 10 to 11.
