Key Messages for 2020 Jakarta EE Developer Survey Communications

[Body]

Please align your blogs and other communications about the 2020 Jakarta EE Developer Survey with the following messages:

- The Jakarta EE Developer Survey is in its third year and is one of the Java industry's largest developer surveys.
- The survey is open April 6-30, 2020.
- The survey results provide insight that is essential to better understand the Java industry landscape, the challenges Java developers are facing, and the opportunities for enterprise Java stakeholders in the cloud native era.
- The 2019 Jakarta EE Developer Survey had more than 1,700 responses from individuals around the world. This clearly indicates the Java ecosystem recognizes the value of the survey results.
- The 2019 survey provided critical insight into the state of cloud native innovation for enterprise java development globally, including expected growth rates for Java apps in the cloud as well as leading architectures, applications, and technologies.
- This year's survey asks developers to share their next steps for Java and cloud native development and their choices for architectures, technologies, and tools as cloud native for Java matures.
- The results of the 2020 survey will give platform vendors, enterprises, and individual developers in the Java ecosystem updated information about how the cloud native for Java world is unfolding and what it means for their strategies and businesses.
- The survey results also help the Jakarta EE community at the Eclipse Foundation better understand the top priorities for future Jakarta EE releases.
- The survey takes less than 10 minutes to complete.
- All developers in the Java ecosystem are encouraged to add their voice to the survey to help the industry gain the broadest possible view of the state of cloud native technologies in the context of enterprise Java.
